

Spray

Package org.eclipse.sprays.spraying.requirements.actors

Use cases and actors overview

Actor	Type	Description
<code>SprayDeveloper</code>	System	The person who provides bugfixes and new Spray features.
<code>SprayBuildManager</code>	System	The person who delivers new Spray releases / update sites.
<code>DomainExpert</code>	System	The person who defines the domain meta model.
<code>DiagramEditorCreator</code>	System	The person who defines / generates the diagram editor for a given domain meta model.
<code>DiagramEditorUser</code>	System	The person who uses the generated diagram editor to create a new domain model.

org.eclipselabs.spray.requirements.actors

SprayDeveloper

SprayBuildManager

DomainExpert

DiagramEditorCreator

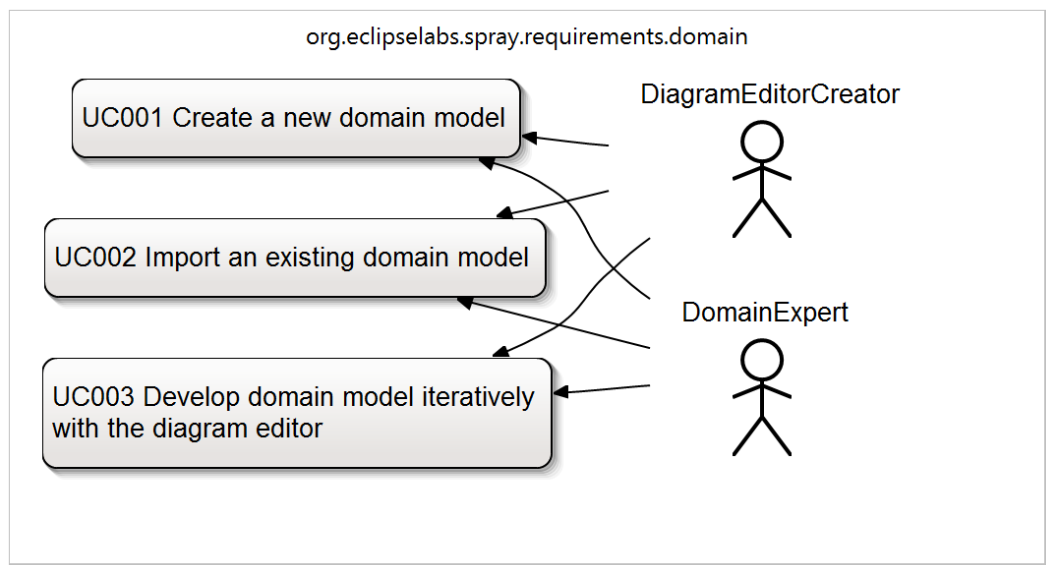

DiagramEditorUser

Package org.eclipse.sprays.spray.requirements.domain

Use cases and actors overview

Use case UC001 Create a new domain model

Actors	DomainExpert , DiagramEditorCreator
--------	---

Use case UC002 Import an existing domain model

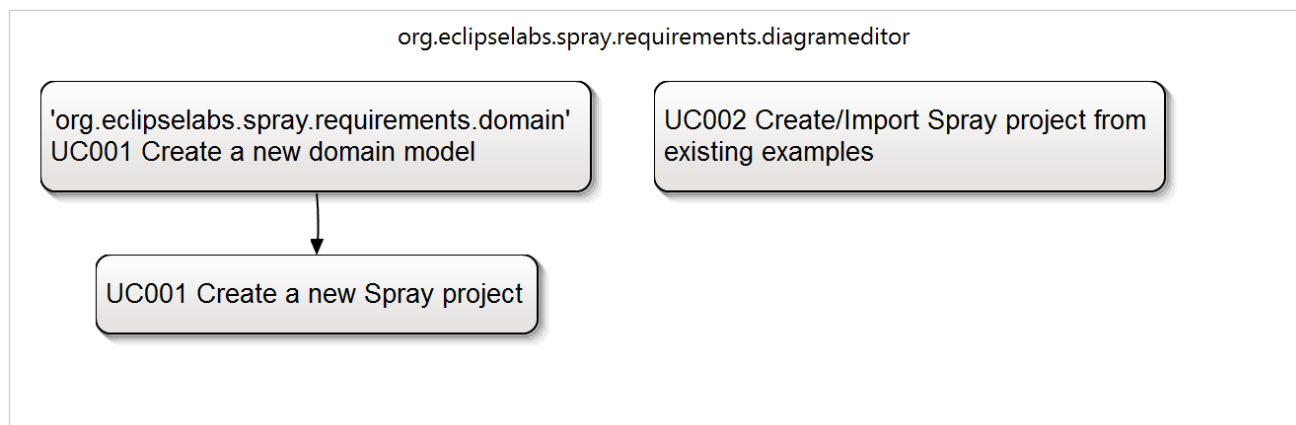

Actors	DomainExpert , DiagramEditorCreator
--------	---

Use case UC003 Develop domain model iteratively with the diagram editor

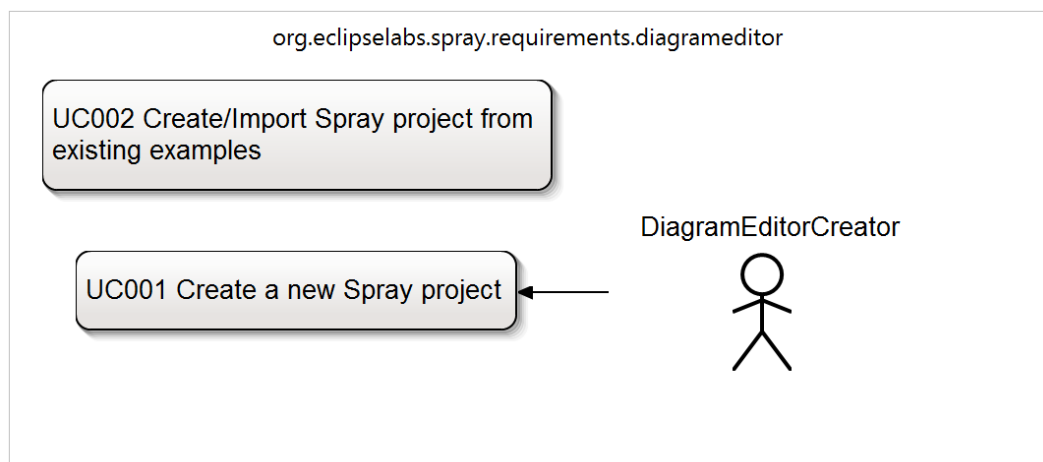

Actors	DomainExpert , DiagramEditorCreator
--------	---

Package org.eclipse.sprays.sprays.requirements.diagrameditor

Business process overview

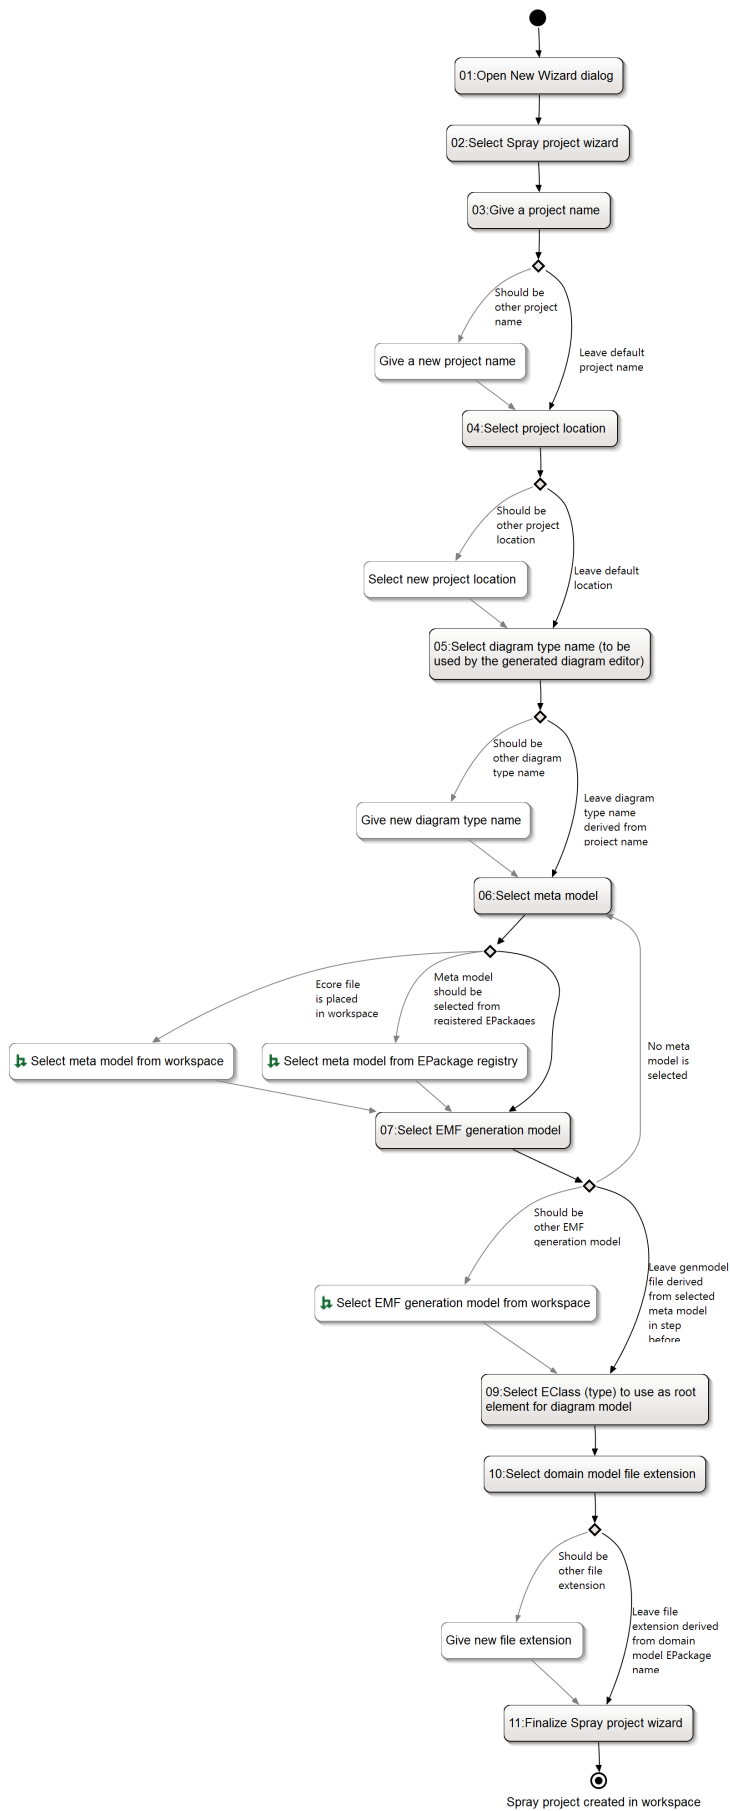

Use cases and actors overview

Use case UC001 Create a new Spray project

Pre conditions	Domain model exists (UC001)
Post conditions	Spray project created in workspaceSpray project wizard is finalizable(Incomplete fields) Spray project wizard uses a unique project name(Duplicate project name)Spray project wizard uses a valid project name(Invalid project name)genmodel file selected(Select EMF generation model from workspace)meta model selected(Select meta model from workspace, Select meta model from EPackage registry)
Actors	DiagramEditorCreator
Screens	Workbench.emptyWorkbench , Workbench.projectWizardComplete , newWizardDialog.projectWizardSelection
Requirements	issue0021 issue0021

Basic flow	01	Open New Wizard dialog Screen: Workbench.emptyWorkbench
	02	Select Spray project wizard Screen: newWizardDialog.projectWizardSelection
	03	Give a project name Screen: Workbench.projectWizardComplete → If Should be other project name: Give a new project name → Continue if Leave default project name
	04	Select project location Screen: Workbench.projectWizardComplete → If Should be other project location: Select new project location → Continue if Leave default location
	05	Select diagram type name (to be used by the generated diagram editor) Screen: Workbench.projectWizardComplete → If Should be other diagram type name: Give new diagram type name → Continue if Leave diagram type name derived from project name
	06	Select meta model Screen: Workbench.projectWizardComplete → If Ecore file is placed in workspace: Alternative Select meta model from workspace → Continue with step 07 → If Meta model should be selected from registered EPackages: Alternative Select meta model from EPackage registry → Continue with step 07
	07	Select EMF generation model Screen: Workbench.projectWizardComplete → If No meta model is selected: → Continue with step 06 → If Should be other EMF generation model: Alternative Select EMF generation model from workspace → Continue with step 09 → Continue if Leave genmodel file derived from selected meta model in step before
	09	Select EClass (type) to use as root element for diagram model Screen: Workbench.projectWizardComplete
	10	Select domain model file extension → If Should be other file extension: Give new file extension → Continue if Leave file extension derived from domain model EPackage name
	11	Finalize Spray project wizard
	End of flow with post condition: Spray project created in workspace	

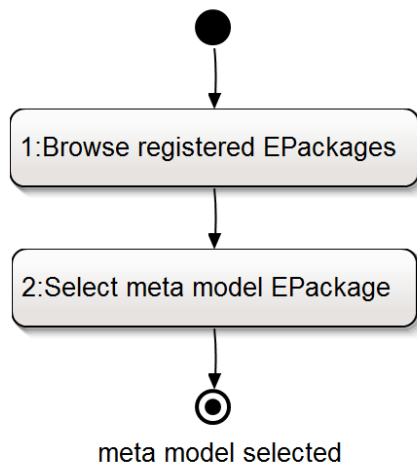

Alternative: Select meta model from workspace	1	Browse workspace
	2	Select Ecore file
	End of flow with post condition: meta model selected	

UC001 - Create a new Spray project
Alternative Flow : Select meta model from workspace

Alternative: Select meta model from EPackage registry	1	Browse registered EPackages
	2	Select meta model EPackage
	End of flow with post condition: meta model selected	

UC001 - Create a new Spray project
Alternative Flow : Select meta model from EPackage registry

Alternative:
Select EMF
generation
model from
workspace

- | | |
|---|----------------------|
| 1 | Browse workspace |
| 2 | Select genmodel file |

End of flow with post condition: genmodel file selected

UC001 - Create a new Spray project

Alternative Flow : Select EMF generation model from workspace

Exception:

Invalid project
name

If Project name contains invalid characters

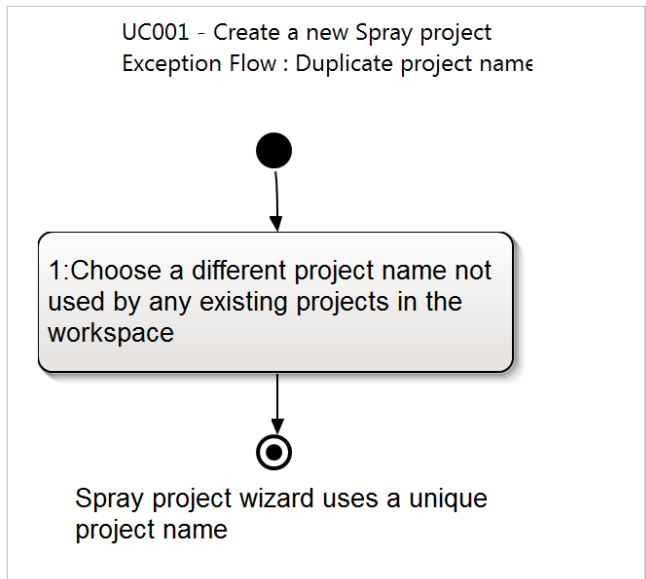

1 Remove invalid characters from project name

Stop of flow with post condition: Spray project wizard uses a valid project name

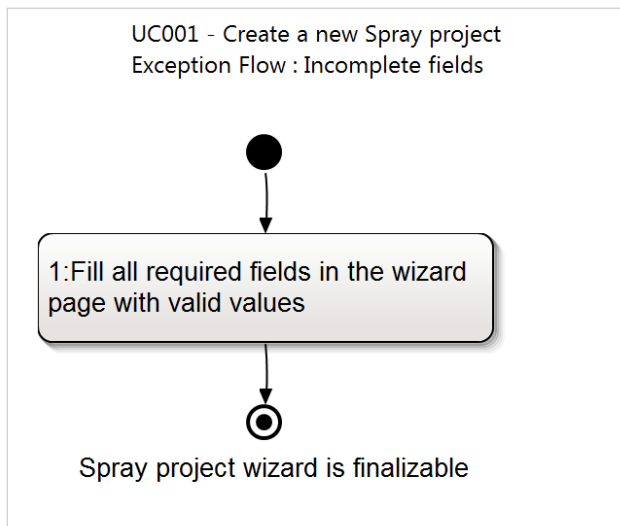

UC001 - Create a new Spray project
Exception Flow : Invalid project name

Exception: Duplicate project name	If There is already a project in the workspace with the given name	
	1	Choose a different project name not used by any existing projects in the workspace
	Stop of flow with post condition: Spray project wizard uses a unique project name	

Exception: Incomplete fields	If Not all required fields of the wizard are filled	
	1	Fill all required fields in the wizard page with valid values
	Stop of flow with post condition: Spray project wizard is finalizable	

Use case UC002 Create/Import Spray project from existing examples

Requirements	
	issue0250 issue0250

Package org.eclipse.spray.requirements.diagrammapping

Use cases and actors overview

UC109 Use shape library (jar at classpath containing shape files)

UC108 Serialization of Xtext domain model when saving diagram

UC107 Enable Xtext auto completion in diagram editor shapes

UC106 Enable simulation within generated diagram editor

UC105 Define integration points to other frameworks, tools, views etc.

UC104 Define interaction behavior

UC103 Declare events for which post processing gap classes should be generated

UC102 Map containment relationships in the domain model to be represented as connection line in the diagram

UC101 Define drill down behavior

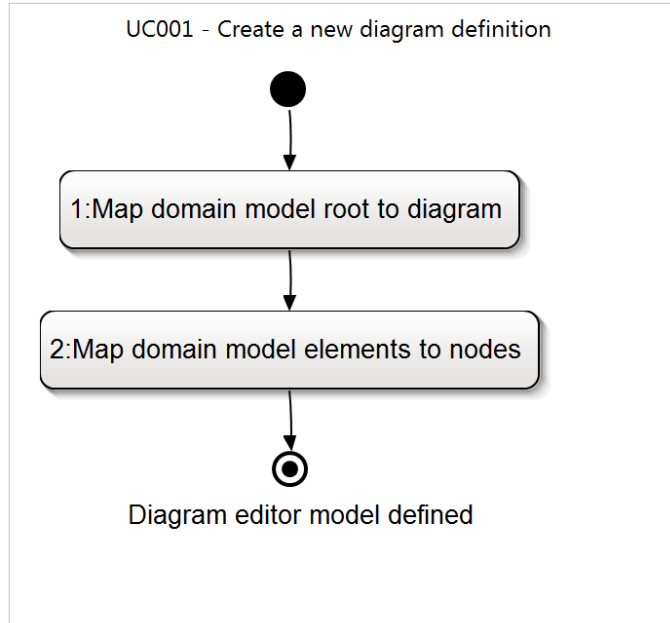

UC001 Create a new diagram definition

DiagramEditorCreator

Use case UC001 Create a new diagram definition

Post conditions	Diagram editor model defined
Actors	DiagramEditorCreator
Entities	Diagram
Basic flow	1 Map domain model root to diagram <i>Entities:</i> Diagram
	2 Map domain model elements to nodes <i>Entities:</i> MetaClass
	End of flow with post condition: Diagram editor model defined

Use case UC101 Define drill down behavior

Description	To generate multiple diagram editors for different parts of the model and enable to browse from one to the other editor (drill down feature)
-------------	--

Use case UC102 Map containment relationships in the domain model to be represented as connection line in the diagram

Use case UC103 Declare events for which post processing gap classes should be generated

Requirements	issue0258 issue0258
--------------	---

Use case UC104 Define interaction behavior

Description	Example: Click on existing connections between A and B creates new node C and the existing connection AB is replaced with two new connections, AC and CB
--------------------	--

Use case UC105 Define integration points to other frameworks, tools, views etc.

Description	Examples: Integration with existing model browser, see also Sphinx (http://www.eclipse.org/sphinx/)
--------------------	--

Use case UC106 Enable simulation within generated diagram editor

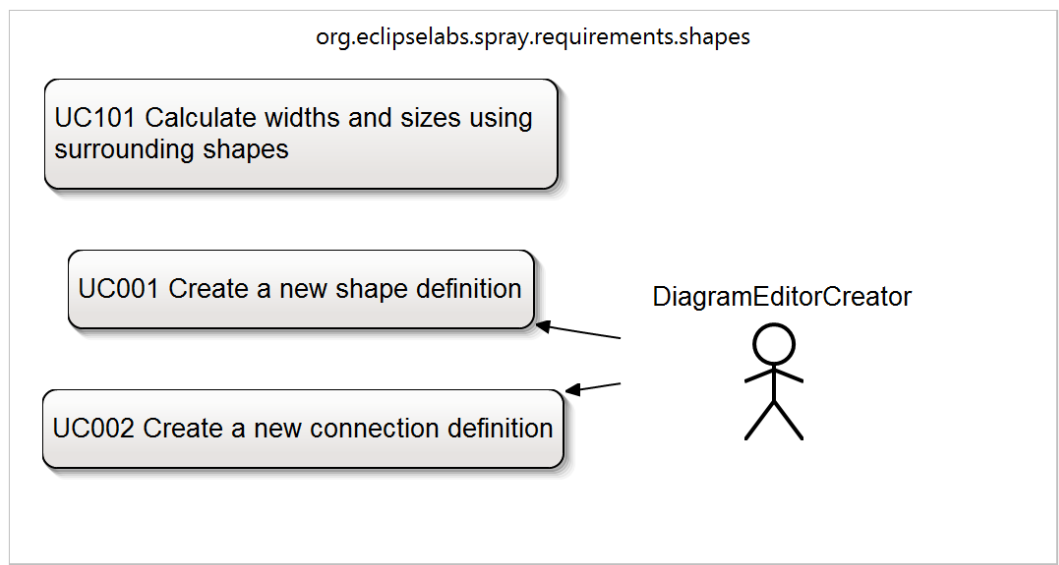

Use case UC107 Enable Xtext auto completion in diagram editor shapes

Use case UC108 Serialization of Xtext domain model when saving diagram

Use case UC109 Use shape library (jar at classpath containing shape files)

Package org.eclipse.sprays.shapes

Use cases and actors overview

Use case UC001 Create a new shape definition

Actors	DiagramEditorCreator
--------	--------------------------------------

Use case UC002 Create a new connection definition

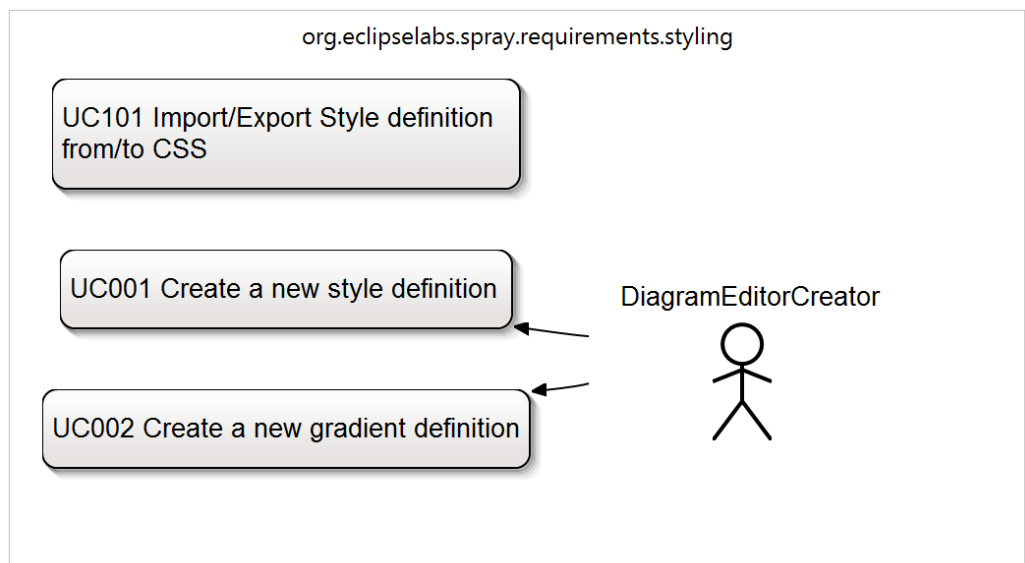

Actors	DiagramEditorCreator
--------	--------------------------------------

Use case UC101 Calculate widths and sizes using surrounding shapes

Requirements	issue0114 issue0114 , issue0115 issue0115
--------------	---

Package org.eclipselabs.spray.requirements.styling

Use cases and actors overview

Use case UC001 Create a new style definition

Actors	DiagramEditorCreator
--------	--------------------------------------

Use case UC002 Create a new gradient definition

Actors	DiagramEditorCreator
--------	--------------------------------------

Use case UC101 Import/Export Style definition from/to CSS

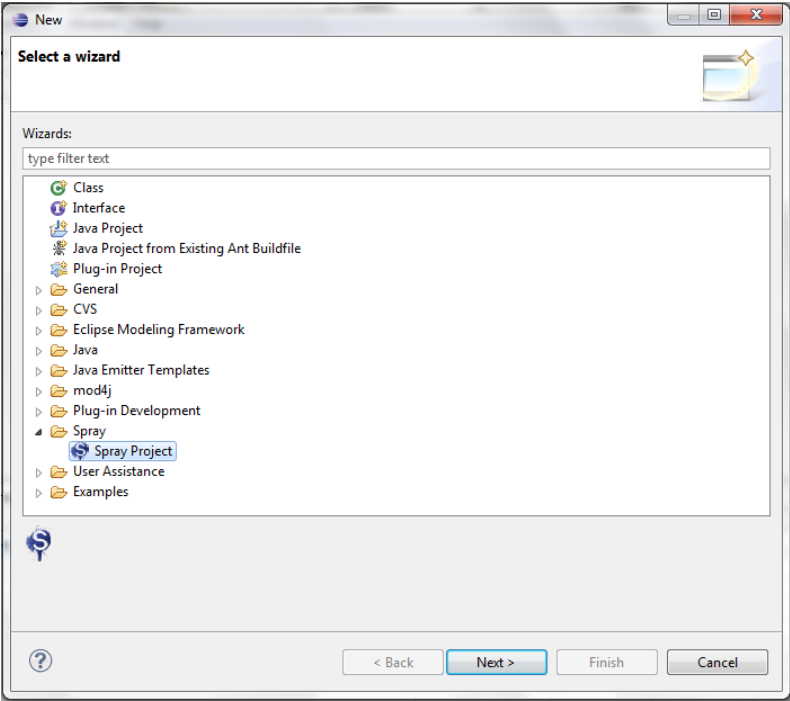

User Interface Application Spray Diagram Editor

Describing domain specific visual editors

Page Workbench The initial Spray IDE workbench window

<div data-bbox="145 367 250 398" data-label="Section-Header"><h3>Screens</h3></div>

Dialog newWizardDialog Select a wizard

Description	Common dialog to select a project wizard
Screens	<div>projectWizardSelection</div> 
Widgets	Label <code>SprayProject</code> Spray -> Spray Project
Options	<div>Cancel Cancel</div> <div>Next Next</div>

User Interface Application BPMN 2.0: Receipt process

Page receiptDiagram

Screens

receiptDiagramEditor

The diagram shows a receipt process flow. It starts with an 'Envelope' event, followed by a task 'Leave in email in'. This leads to a 'Circle' event, which then leads to a task 'Place in filing ca'. From 'Place in filing ca', the flow goes to a task 'Stamp all receiv'. This task leads to a task 'Separate stand', which then leads to a task 'Collect internal n'. Finally, 'Collect internal n' leads back to the 'Circle' event, completing the loop. The diagram is displayed in the 'receiptDiagramEditor' window, which includes a palette on the right with various BPMN elements like Select, Marquee, Storage, Conversation, Activity, Event, Gateway, List, and Connections. Below the diagram, there is a 'Properties' panel with fields for 'Name' (Stamp all received forms with today's date) and 'Description'.

User Interface Application Heat exchanger

Page heatExchangerDiagram

Screens

heatExchangerDiagramEditor

The diagram shows a process flow for a heating system. It includes a 'Boiler' (green circle with a wavy line), a 'Radiator' (green circle with a wavy line), a 'Central Heating' unit (green circle with a wavy line), and two pumps labeled 'P1' and 'P2'. There are also two valves labeled 'V1' and 'V2'. The components are connected by solid and dashed lines, representing different types of connections. A 'Palette' on the right lists available components: Locations, Noline, Solidline, Dashedline, Pumps, Vessels, Horizontal, Vertical, HeatExchanger, Systemend, Valves, Connections, Joints, and Joint. The interface also has a 'Properties' panel at the bottom with fields for 'Name' (containing 'T') and 'Description'.

Name	issue0005
Description	<p>Add Maven POMs</p> <p>01.09.2011 17:12:39 (karsten.thoms): Add Maven POMs to each project and provide a master POM.</p> <p>The master POM should be in the /releng folder.</p> <p>01.09.2011 21:56:39 (karsten.thoms): Done</p> <p>28.10.2011 13:12:42 (karsten.thoms): This issue was closed by revision df2a900a8211.</p>
Status	DONE
Stakeholder	Spray developer
Keywords	Type: Task, Priority: Medium

Requirement – issue0006 issue0006

Name	Value
Identifier	issue0006
Name	issue0006
Description	<p>Use real cross-references for rule MetaClass</p> <p>01.09.2011 23:54:03 (karsten.thoms): Currently the metaclass name is just an named reference, no real cross reference.</p> <p>Rule "MetaClass" must be changed from:</p> <pre> {{{ MetaClass : 'class' name=ID ('alias' alias=ID)? ('icon' icon=STRING)? }}} to: {{{ MetaClass : 'class' name=[ecore::EClass Qualified Name] ('alias' alias=ID)? ('icon' icon=STRING)? }}}</pre> <p>01.09.2011 23:54:36 (karsten.thoms):</p> <p>09.09.2011 00:12:34 (karsten.thoms):</p> <p>09.09.2011 01:22:56 (karsten.thoms): Done.</p> <p>Spray uses now cross-references to the EClasses referred to by the 'class' concept. The DSL itself does not change much, but the implementation did change significantly.</p>
Status	DONE
Stakeholder	Spray user
Keywords	Type: Defect, Priority: Medium

Requirement – issue0007 issue0007

Name	Value
Identifier	issue0007
Name	issue0007
Description	

Name	Value
	<p>Enable referencing of IColorConstant instances as color</p> <p>02.09.2011 15:06:38 (karsten.thoms): Spray uses an enum to define colors. The generator maps that to IColorConstants. The Spray DSL should directly refer to a JvmType and filter them by type IColorConstant.</p> <pre> {{{ ... lineColor = Color ... enum Color : BLACK = 'black' }}}</pre> <p>Change to:</p> <pre> {{{ Color : type = JvmTypeReference }}}</pre> <p>Later this should be extended to compute the color by an Xbase expression.</p> <p>21.09.2011 23:02:32 (karsten.thoms): Colors from IColorConstant can be referred by their lower-case simple name ('black'), all others can be referred to by qualified field name (IColorConstant::BLACK)</p> <p>This is configurable in principle, depending on the runtime implementation. A runtime must therefore implement IColorConstantTypeProvider.</p> <p>User Guide: http://code.google.com/a/eclipselabs.org/p/spray/wiki/UserGuide_Language_Layout</p>

Description	

Name	Value
	<p>Provide working SWTBot Tests for the example project</p> <p>02.09.2011 16:19:49 (de.abg.reichert.joerg): The SWTBot tests as black box tests should ensure, that the generated example diagram code provides the expected behavior. This should make the developers confident, that changes to the DSL and the associated generator, that break the expected behavior, are discovered soon.</p> <p>Beside the SWTBot tests there can be implemented simple unit tests for single features, too. This would require a lot of mocking interacting classes, but with those tests, causes of misbehavior can be spotted more easily. Here also the dark feature processing is needed: http://help.eclipse.org/indigo/topic/org.eclipse.graphiti.doc/resources/docu/gfw/dark-feature-processing.htm</p> <p>How to run SWTBot headless in Maven is described here: http://wiki.eclipse.org/SWTBot/Maven</p> <p>Take the example tests contained in Graphiti source code as reference:</p> <p>PSF for CVS or better http://git.eclipse.org/c/gmp/org.eclipse.gmp.graphiti.git/</p> <pre><psf version="2.0"> <provider id="org.eclipse.team.cvs.core.cvsnature"> <project reference="1.0.;pserver.dev.eclipse.org:/cvsroot/ modeling.org.eclipse.gmp/org.eclipse.gmp.graphiti/tests/ org.eclipse.graphiti.bot.tests.org.eclipse.graphiti.bot.tests"/> <project reference="1.0.;pserver.dev.eclipse.org:/cvsroot/ modeling.org.eclipse.gmp/org.eclipse.gmp.graphiti/tests/ org.eclipse.graphiti.tests.org.eclipse.graphiti.tests"/> <project reference="1.0.;pserver.dev.eclipse.org:/cvsroot/ modeling.org.eclipse.gmp/org.eclipse.gmp.graphiti/features/ org.eclipse.graphiti.tests-feature.org.eclipse.graphiti.tests-feature"/> <project reference="1.0.;pserver.dev.eclipse.org:/cvsroot/ modeling.org.eclipse.gmp/org.eclipse.gmp.graphiti/tests/ org.eclipse.graphiti.testtool.ecore.org.eclipse.graphiti.testtool.ecore"/> <project reference="1.0.;pserver.dev.eclipse.org:/cvsroot/ modeling.org.eclipse.gmp/org.eclipse.gmp.graphiti/tests/ org.eclipse.graphiti.testtool.sketch.org.eclipse.graphiti.testtool.sketch"/> <project reference="1.0.;pserver.dev.eclipse.org:/cvsroot/ modeling.org.eclipse.gmp/org.eclipse.gmp.graphiti/tests/ org.eclipse.graphiti.ui.tests.org.eclipse.graphiti.ui.tests"/> </provider> </psf></pre> <p>02.09.2011 16:24:42 (karsten.thoms): If the first SWT Bot tests are available, I will enable them in the build.</p> <p>13.09.2011 08:59:24 (karsten.thoms): Found useful post here: http://dev.eclipse.org/mhonarc/lists/tycho-user/msg00466.html</p> <p>13.09.2011 09:34:25 (karsten.thoms):</p> <p>13.09.2011 14:39:00 (project.spray): Execution of the SWT Bot tests are now included in the build.</p> <p>For the CI Build they are disabled (by activating profile "skip-ui-tests").</p> <p>09.11.2011 14:25:27 (de.abg.reichert.joerg): Currently the example one example SWTBot Test is very fragile. It works only on certain machines, sometimes if cannot found actual visible elements in the dialog and thus abort and so on.</p> <p>Some problems may fix with more use of async access blocks and sleeps. But if this is enough, one should consider evaluating one of these tools instead: * http://code.google.com/intl/de-DE/javadevtools/wintester/html/index.html * http://www.eclipse.org/jubula/</p> <p>The testing of UI is still very important as some problems only occur in a running Eclipse (ok, some of these issues may be covered by Simple JUnit plug-in tests). The UI test tool to choose, should produce predictable results and should be able to test GEF based stuff.</p> <p>13.04.2012 11:32:48 (de.abg.reichert.joerg): There is a test case for the default use of the Spray wizard to create a new Spray project, then inserting the custom Spray Xtext definition and then running the generator:</p> <p>http://code.google.com/a/eclipseorg/org.eclipse.spraysource/browse/tests/org.eclipse.spraysource.tests/src/org.eclipse.spraysource.tests/examples/one/test/WizardTest.java</p> <p>There is still lot to do, e.g. currently there is no validation of the results of the UI test, the special cases are not covered yet (different configurations in the wizard, although the test infrastructure allows customization easily).</p> <p>Another things, that a Maven Tycho build is currently not able to set up a PDE/OSGi enabled Eclipse test instance, so you cannot run a UI test that creates plug-in projects that needs dependency resolving or even more to use these just created plug-in projects to start a further Eclipse instance, e.g. to check if your able to create Graphiti diagram from the generated projects.</p> <p>So these test steps have to be split up:</p> <ol style="list-style-type: none"> 1. Test the generation and use of the Spray diagram project 2. Test the usability of the just before generated and Spray diagram project to create a Graphiti diagram (this would be a further UI Test process using the generated Spray diagram project as plug-in dependency - so this project must be available from somewhere, e.g. from a tmp directory) <p>As this task is to big to track, it will splitted in smaller issues. Thus this issue will be marked as fixed in context of providing a reusable test infrastructure.</p>

	<p>Change the path handling so the Graphiti generator can be used inside an automated build</p> <p>06.09.2011 15:06:13 (de.abg.reichert.joerg): Originally there were used absolute paths. This has been slightly improved by using relative paths now. But this mechanism will not work, when the referenced file is contained within a jar file.</p> <p>examples/org.xspray.examples.one/model/mod4j-busmod.properties contains property projectPath. This is used as destination folder for the generated files.</p> <p>examples/org.xspray.examples.one/model/mod4j-busmod.xspray uses the path to import the BusinessDomainDsl.ecore.</p> <p>org.xspray.xtext.generator.Main from project plugins/org.xspray.xtext is launched with the path to the .xspray file as input parameter.</p> <p>Using "platform:/resource/" does not work, the so addressed files cannot be found this way. This might be due the fact that the projects are imported as reference in my Eclipse workspace from my local git repository.</p> <p>The relative path solution assumes currently that org.xspray.xtext is current working directory from that the domain meta model resp. the target generation project can be reached that way: ../../../../examples/org.mod4j.dsl.businessdomain.mm/model/BusinessDomainDsl.ecore ../../../../examples/org.xspray.examples.one</p> <p>18.10.2011 17:21:45 (joswarmer): IS this styill open ?</p> <p>18.10.2011 18:07:53 (de.abg.reichert.joerg): No, I do not think so.</p>

"Import" -> "Plug-ins and Fragments" -> Import from "The active target platform" Plug-ins and Fragments to Import "Select from all.." Import As "Projects with source folders" 3. Choose "org.xspray.examples.one"</p> <p>What is the expected output? What do you see instead? Build errors: Description Resource Path Location Type Package 'org.xspray.examples.mod4j.diagram' does not exist in this plug-in MANIFEST.MF /org.xspray.examples.one/META-INF line 6 Plug-in Problem Package 'org.xspray.examples.mod4j.features' does not exist in this plug-in MANIFEST.MF /org.xspray.examples.one/META-INF line 6 Plug-in Problem and associated errors due to this in mod4j-busmod.xspray.</p> <p>Also there is no syntax highlighting or anything like that in /org.xspray.examples.one/src/org/kspray/examples/one/XsprayGenerator.mwe2 Adding a dependency to the appropriate tooling would be nice.</p> <p>What version of the product are you using? On what operating system? Just eclipse-modeling-indigo-linux-gtk-x86_64.tar.gz</p> <p>Please provide any additional information below. Installing the Xtext SDK from http://download.eclipse.org/modeling/tmf/xtext/updates/composite/releases/ fixed the syntax highlighting/editor support for the .mwe2 file.</p> <p>11.09.2011 13:53:22 (karsten.thoms): Confirmed, but I cannot really explain why the classes from /src-gen are not included. When exporting the project from Eclipse, the resulting Jars are fine. In the Maven build they are broken. Strange is that the same does work for other plugins, i.e. org.xspray.mm. Also there are classes in a second source folder, but they build correctly.</p> <p>I will observe this problem and try a bit.</p> <p>12.09.2011 14:01:31 (karsten.thoms): The missing MWE2 UI feature was solved with issue#26.</p> <p>26.09.2011 12:39:28 (karsten.thoms): Added MWE2 workflow execution to the build of the example project.</p> <p>The resulting Jars contain now the missing classes / sources.</p> <p>Checked the Jars from Build#70, will be fixed with release 0.3.0.</p>

Description	<p>Provide Xspray new project wizard</p> <p>11.09.2011 13:06:45 (karsten.thoms): Creation of Spray projects should be as easy as possible. A project wizard should be added to create a project with the structure as in org.xspray.example.one.</p> <p>12.09.2011 10:04:23 (karsten.thoms):</p> <p>12.09.2011 10:44:15 (karsten.thoms): Project wizard is implemented initially and pushed to master.</p> <p>Todo: The main package should now enable selecting an Ecore package. The plugin containing the Ecore package must be added to the required plugins. The genmodel for this package should be located to derive the "extension" value in the xspray model.</p> <p>21.10.2011 22:12:10 (karsten.thoms): Considering this one as fixed now. The project wizard allows now selection of the Ecore model and Genmodel. The Ecore model can be selected from registered packages.</p> <p>Added a second sheet to specify the generator settings.</p>

Requirement – issue0022 issue0022

Name	Value
Identifier	issue0022
Name	issue0022
Description	

Name	Value
	<p>The generation gap classes are placed in src-gen, should be placed in src</p> <p>11.09.2011 13:42:02 (de.abg.reichert,joerg): example: mod4\DiagramTypeProvider as well as mod4\DiagramTypeProviderBase are placed inside src-gen, but mod4\DiagramTypeProvider should reside in src, so changes would not get thrown away after regeneration</p> <p>The Xspray generator should therefore define different outlets.</p> <p>12.09.2011 17:21:03 (joswarmer): Generation of the 'empty' files (like mod4\DiagramTypeProvider) in the src-gen folder is done on purpose. These need to be generated in the src-gen folder. Only when a user wants to change a file, he should move it to the src folder. Advantages of this scheme are:</p> <ul style="list-style-type: none"> - regeneration as much as possible. Sometimes the 'empty' files change because of changes in the generator, , or sometimes they might need to contain some code. - better overview for the user., He will only see files in the src folder that he has actually changed. Given the huge amount of files that may be generated it is not workable to generate them all in the src folder. It will be impossible for the user to find his manual changes. <p>12.09.2011 17:22:18 (joswarmer): I'll handle this one.</p> <p>12.09.2011 17:26:56 (de.abg.reichert,joerg): Maybe we should consider the pattern used in Sculptor: http://fornax.itemis.de/confluence/display/fornax/3.+Advanced+Tutorial+(CSC)#3.AdvancedTutorial(CSC)-GapClass</p> <p>i.e. introduce a keyword gap - only for elements in the DSL containing "gap" a gap class is generated: so if the user want to adapt a default behaviour he just annotate the element in the DSL with "gap"</p> <p>12.09.2011 17:55:02 (joswarmer): We could go the Fornax way, but I see no big advantage. I have good experiences with the way it is done now. I propose to leave it as is, I think there are more pressing issues to deal with.</p> <p>24.09.2011 22:15:36 (Alex.Roldugin): So, if I want to change mod4\DiagramTypeProvider.java file, I have to move it from src-gen to src directory and then make changes? But if it's so, after code-regeneration mod4\DiagramTypeProvider.java appears in src-gen again and I'll get 'The type mod4\DiagramTypeProvider is already defined'. So, now it's bug - am I right?</p> <p>25.09.2011 21:59:00 (joswarmer): No, it works slightly more intelligent. If the file is moved to src the generator will recognize that it has been moved and will not generate the file again.</p> <p>28.09.2011 20:37:53 (Alex.Roldugin): Yes, you're right! I found this place in org.eclipseelabs.spray.generator.graphiti.templates.SprayGenerator.xtend But I cannot understand why, but if I create new spray(0.2.0)-project (using wizard, with default settings) - source code generates perfectly in "src-gen"!</p> <p>Then I create org.eclipseelabs.spray.examples.mydiagram.diagram package in "src" and copy here some file (e.g. MyDiagramDiagramTypeProvider) from "src-gen" (from the same package) to "src" and try to clean and rebuild workspace, then I got two MyDiagramDiagramTypeProvider.java files (in "src" and "src-gen") and "The type MyDiagramDiagramTypeProvider is already defined"-error for those that lays in "src".</p> <p>Jos, maybe You know (or someone else) quick way to fix this error or maybe I do something wrong?</p> <p>28.09.2011 20:44:22 (Alex.Roldugin): "In FileGenerator.xtend, not in SprayGenerator.xtend</p> <p>28.09.2011 23:45:42 (Alex.Roldugin): If I ran eclipse with enabled -consoleLog then I got this log:</p> <pre> PROPERTIES [platform:/resource/org.eclipseelabs.spray.examples.MyDiagram/ model/MyDiagram.properties] EclipseResourceFileSystemAccess: WARNING: dos not work yet generating org/eclipseelabs/spray/examples/mydiagram/diagram/ MyDiagramDiagramTypeProvider.java </pre> <p>PS: I use Windows XP</p> <p>03.10.2011 16:13:28 (jos.warmer@openmodeling.nl): Make sure that the file you are copying is meant to be used for manual extensions /overriding. The base class never is and will always be generated. You can see this in the generated comment at the start of the file. Can you check this?</p> <p>03.10.2011 16:51:05 (Alex.Roldugin): Yes. I saw all this comments about extension point, so it was my first step for working with spray - copy this file (without suffix Base) to "src".</p> <p>I went through project's source codes and found that in my case for some reason for source code generation used not 'JavalioFileSystemAccess', but 'EclipseResourceFileSystemAccess' object. So that's why we see warning: 'EclipseResourceFileSystemAccess: WARNING: dos not work yet' (you can see it in SprayGraphityGenerator.xtend:doGenerate)</p> <p>And I think because of this generator looks for file not in workspace directory, but in eclipse start directory (e.g. C:\Program Files\ eclipse\).</p> <p>So in my case for generation uses JavaGenFile's object with uninitialized Gen and Man output paths (the same doGenerate method), at least we should add:</p> <pre> if (javaFsa != null) { java = new JavaGenFile(javaFsa) java.setGenOutputPath(genOutputPath) java.setManOutputPath(manOutputPath) } else { java = new JavaGenFile(eclipseFsa) // add two following lines java.setGenOutputPath(genOutputPath) java.setManOutputPath(manOutputPath) } </pre> <p>After adding this lines generator again will looks for file in eclipse's start directory. But if we set eclipse start directory to workspace directory it works pretty well. Ofcourse it isn't right solution, but as quick fix can be used.</p> <p>Maybe you know what should I do to make generator use 'JavalioFileSystemAccess' object instead of 'EclipseResourceFileSystemAccess'?</p> <p>05.10.2011 09:31:51 (jos.warmer@openmodeling.nl): Right, when I committed the first code, this was only working while running the generator from the Main program, not inside Eclipse. I'll take a look how to fix this for buildinh inside Eclipse</p> <p>08.10.2011 21:51:13 (Alex.Roldugin): Can you, at least, add those two lines of initializing gen and man pathes as I mention above to repository - it helps me to omit adding this modifications by myself and rebuilding spray any time I sync with your's repository.</p> <p>Can you do this for me?</p> <p>18.10.2011 10:43:00 (de.abg.reichert,joerg): with commit 8a4ab0272644c2655cda8678df9014112670e50 the output paths are added as requested in #c14</p> <p>18.10.2011 10:45:40 (de.abg.reichert,joerg): As discussed yesterday it is very likely that in the future there will be a configuration file in the project that registers all classes for that a gap class should be generated. To ease that configuration there will be UI enhancements that support creating new gap classes from existing generated classes.</p> <p>18.10.2011 15:04:03 (joswarmer): I'll handle this one. The path should only be used when not inside Eclipse. Within Eclipse we should use the project to find the location for the different folders.</p> <p>18.10.2011 17:19:49 (joswarmer): Changed code generation in Eclipse to use the project location instead of the projectPath from the properties file. Now the generator works standalone and as an eclipse builder.</p> <p>Also repaired the fact that extension point files that were moved to 'src' were still generated.</p>

	<p>Use ImportUtil to manage imports in templates</p> <p>23.09.2011 08:29:09 (karsten.thoms): Templates contain sometimes a huge amount of logic to create the right imports. For example, FeatureProvider.xtend uses 50 lines of code just for computed imports.</p> <pre> {{{ ... import «feature_package()».«diagram.name»Layout«cls.visibleName()»Feature; // 4 «IF cls.representedBy instanceof Container» «var container = cls.representedBy as Container » «FOR MetaReference reference : container.parts.filter(typeof(MetaReference)) » «var references = cls.type.EAllReferences » «val referenceName = reference.getName» «var target = references.findFirst(e e.name == referenceName) » «IF ! target.EReferenceType.abstract» import «feature_package()».«cls.diagram.name»Create«cls.getName»«reference.getNam e»«target.EReferenceType.name»Feature; ... }}}</pre> <p>Therefore there is the ImportUtil class, which uses an ImportManager to collect the qualified names of used classes, and prints out the simple name.</p> <p>To use it, the body of a template must be evaluated first before printing out the imports. As a reference look at AddConnectionFeature.xtend, the mainFile() method initializes ImportUtil and delegates to mainFileBody to evaluate the file content and their imports.</p> <p>23.09.2011 13:58:19 (joswarmer): The class XtendProperties in Spray also contains an import manager that is used already in some of the Spray templates. I just did not get around to use it in all templates. Can we compare the use of ImportUtil and XtendProperties ?</p> <p>26.09.2011 12:33:03 (karsten.thoms):</p> <p>27.09.2011 11:27:19 (karsten.thoms): I will investigate the use of XtendProperties. The import manager used there is quite simple. I have leveraged the one from EMF, which is far more advanced. I am not completely sure in which extend it does also more for us. But I'd prefer to reuse such a component before having an own one.</p> <p>27.09.2011 11:35:03 (joswarmer): Sounds like a good idea, if the already existing one has everything we need, let's reuse it.</p> <p>27.09.2011 12:01:12 (karsten.thoms): I have documented the pattern here: http://code.google.com/a/eclipselabs.org/p/spray/wiki/DevGuide_Generator?ts=1317117450&updated=DevGuide_Generator#Import_Organizing</p> <p>If possible I want to get rid of calling 'importUtil.initImports', or just move it to FileGenerator.</p> <p>04.10.2011 07:20:16 (karsten.thoms): Moved logic to FileGenerator and refactored template code. Using the "MARKER_IMPORT" marker comment.</p> <p>Updated DevGuide: http://code.google.com/a/eclipselabs.org/p/spray/wiki/DevGuide_Generator</p>

	<p>Cannot open generated diagram editor</p> <p>25.09.2011 19:20:17 (de.atlg.reichert.joerg): The editor fails with an exception, that the ECClass cannot be resolved.</p> <p>Date: Sun, 25 Sep 2011 13:44:07 +0200 From: Soeren Dierkes To: graph4-dev@eclipse.org Subject: [graph4-dev] First Editor Message-ID: <48271407.5000000@mathematik.uni-erlangen.de> Content-Type: text/plain; charset=ISO-8859-15; format=flowed</p> <p>Hey everyone,</p> <p>I know it is not the common way to ask via dev-mailinglist, but no one answered me in my thread, so I decide to ask you I think the answer should be pretty easy, but I dont get it for my own.</p> <p>Its my first try to develop a plugin, and I start with your tutorial and just copy paste the first classes to test it and reconfigure it to understand the API. I am able to create a new editor, but if I try to open it there is no ECClass object and I get the exception:</p> <p>Contributor myTutorialPropertyContributor cannot be created. Later in your tutorial it is described how I add this to the plugin.xml and I think I did it like I should. But now I got nothing, no exception, no ECClass, no warning.</p> <p>We tried everything I know, but it doesnt work. Last step, ask some developer.</p> <p>I hope you can help me Soreen</p> <p>25.09.2011 19:23:10 (de.atlg.reichert.joerg): this exception occurs when you try to open the mod4_tutorial.spray file</p> <p>java.lang.IllegalStateException: Cannot determine interface name for ECClass, since the ECClass is an unresolved proxy Description	<p>Move complete generator logic to o.e.s.generator.graphiti</p> <p>26.09.2011 13:26:47 (karsten.thoms): The Spray language plugin should not have a dependency on Graphiti related plugins (o.e.s.generator.graphiti, o.e.s.runtime.graphiti), the dependency must be vice versa.</p> <p>The reason why o.e.s.xtext depends on o.e.s.generator.graphiti is that SprayGenerator.xtend invokes the Graphiti generator. The classes from package o.e.s.xtext.generator must be moved to o.e.s.graphiti.generator.</p> <p>To trigger the build in the UI as before, a BuilderParticipant must be registered outside of the language plugins. Since this is UI related, a new plugin o.e.s.generator.graphiti.ui must be introduced.</p> <p>As a result, o.e.s.xtext must not have a dependency to any *.graphiti.* plugin and the code generator in the UI must still be triggered on model save.</p> <p>28.09.2011 11:35:54 (karsten.thoms): Added new project org.eclipse.sprays.generator.graphiti.ui</p> <p>Described changes in detail in this blog post: http://kthoms.wordpress.com/2011/09/28/moving-an-xtend-generator-into-its-own-plugin/</p>

Create a new project using the wizard. 3. Change the contents of the .spray file to the following: diagram mydiagram2</p> <pre>// Add import statements here, e.g. import BusinessDomainDsl." class BusinessClass: container (fill=dark_green) { // text () { "<<" + eClass.name + ">>" + name }; }</pre> <p>4. Save the file.</p> <p>What is the expected output? What do you see instead? A clean compile. Instead one gets: Description Resource Path Location Type IColorConstant cannot be resolved to a variable Mydiagram2AddBusinessClassFeatureBase.java / org.eclipse.sprays.example.mydiagram2/src-gen/org/eclipse.sprays.example.mydiagram2/features line 65 Java Problem</p> <p>If you add this line: text () { "<<" + eClass.name + ">>" + name }; You will get: Description Resource Path Location Type Couldn't resolve reference to JvmIdentifiableElement '+'. mydiagram2.spray / org.eclipse.sprays.example.mydiagram2/model line: 18 / org.eclipse.sprays.example.mydiagram2/model/mydiagram2.spray Xtext Check (fast)</p> <p>What version of the product are you using? On what operating system? Spray CI 0.3.0, Eclipse Indigo MDT SR1 20110916-0149.</p> <p>Please provide any additional information below. It would be good with a getting started tutorial. I suppose things like this should work with proper setup, so I guess I could be doing something wrong..?</p> <p>09.10.2011 15:52:48 (refsdal.ivar): Solution: Edit .plugins/org.eclipse.sprays.generator.graphiti/src/org/eclipse.sprays.generator.graphiti/templates/AddShapeFeature.xtend and add " import org.eclipse.graphiti.util.IColorConstant; " to line 75.</p> <p>PS: It seems that the current mvn clean install will not detect a changed .xtend file and re-generate the java file. One must open the .xtend file in Eclipse and save it to make it update, at least that was my experience.</p> <p>PS2: Is there a recommended way to check out the source code? I've failed in numerous ways...</p> <p>09.10.2011 16:07:55 (refsdal.ivar): "by check out the source" I mean to import it into Eclipse and then it should compile without errors or further fixes. Building from the console in the releng directory works fine.</p> <p>An example of failure is using "import from Maven projects from SCM " and "https://code.google.com/a/eclipse.sprays.org/p/spray/" as URL from m2eclipse: This will complain about not finding: formax-oaw-m2-plugin:3.0.0:run-workflow tycho-packaging-plugin:0.13.0:validate-id</p> <p>09.10.2011 16:18:00 (jos.warmer@openmodeling.nl): Chnaged Xtend files will not be seen by Maven indeed, the Java files in xtend-gen need to be checked in. This is due to the way Xtend works, it needs the compiled Java classes to generate its own Java, which does not work with Maven.</p> <p>10.10.2011 13:58:41 (karsten.thoms): This issue was closed by revision 7ed5b95bd93b.</p> <p>10.10.2011 14:00:38 (refsdal.ivar): Thanks!</p> <p>10.10.2011 14:02:40 (karsten.thoms): Thanks for reporting!</p> <p>The "missing" plugins can be fetched from the pluginRepositories configured in releng/pom.xml</p> <pre>sonatype http://repository.sonatype.org/content/groups/sonatype-public-grid/ true true formax http://www.formax-platform.org/m2/repository true false</pre> <p>10.10.2011 14:14:59 (refsdal.ivar): Thanks. I figured it was available there too. The problem for me was that (1. I don't know how to use m2eclipse very well or anything maven related really..) 2. m2eclipse/similar seemingly didn't consult the releng pom.xml when importing some of the plugins.</p> <p>Importing releng worked OK IIRC, but not all of the others. I suppose simply adding the above once more to the other pom.xmls would solve this... Somehow I suspect I would not have these problems if I was using items' Eclipse bundle..?</p>

Identifier	issue0045
Name	issue0045
Description	<p>Allow usage of genmodel in workspace</p> <p>11.10.2011 07:58:45 (karsten.thoms): Spray requires that it can look up the Genmodel for a given EClass. Responsible for this is the GenModelHelper. This looks up the map EcorePlugin.getEPackageNsURIToGenModelLocationMap()</p> <p>This map will be filled automatically with genmodels registered by extension point. It does not work with Genmodels that are only in the workspace.</p> <p>For the runtime part, the given GenModelHelper should be sufficient. Additional genmodels must be registered manually, like it is done in the unit tests.</p> <p>In the UI, a specialized GenModelHelper could add look up from the workspace. To do: Write this specialized GenModelHelper in plugin org.eclipse.sprays.text.ui and bind it to the SprayUiModule.</p> <p>18.10.2011 10:38:01 (de.abg.reichert.joerg): resolved with commits 4a7a5cc845d840bac2dfa4e81aca8410338a9e88 and 4a7a5cc845d840bac2dfa4e81aca8410338a9e88</p> <p>28.10.2011 13:11:41 (karsten.thoms): Re-implemented this feature by using a IResourceChangeListener. The new implementation will register all genmodels on startup, on adding, project open. Added deregistering on project close / resource delete.</p> <p>Deleted JavaProjectBasedBuilderParticipant2</p> <p>29.10.2011 09:58:04 (fabio.filippelli): On my workspace i still can not reference to own implemented.ecore models (+ genmodels), but the genmodel will be registered and unregistered on the right way (as the console output shows up).</p> <p>Maybe there is a still an issue with this? Otherwise the steps to add a own implemented.ecore model should be add to the user documentation?</p> <p>30.10.2011 01:13:33 (karsten.thoms): The problem is that the Ecore file must be indexed by Xtext. This does only occur for projects having the Xtext nature. This can be configured from the project's context menu: Configure / Add Xtext Nature.</p> <p>Extended User Guide.</p>

	<p>Provide possibility to set the file extensions of the businessmodel</p> <p>31.10.2011 11:42:50 (veit.hoffmann.vh): The Framework should provide the possibility to set the filename of the businessmodel file. Currently the Framework assumes the name specified in the genmodel of the businessmodel. In many situations this is not the case. E.g. if you create a xtext-dsl from the uml-metamodel for class diagrams you typically wouldn't use the file extension uml that is specified in the genmodel.</p> <p>Karsten Thoms said that this could possibly be handled by adding a field in the properties file.</p> <p>What version of the product are you using? On what operating system? V.0.3.x Win 7</p> <p>01.11.2011 07:35:35 (karsten.thoms): Potentially Spray could potentially map classes from different packages, which would result in different EMF files. It needs to be considered if Spray may be restricted to one, or if the wizard just covers the case to map one EPackage. This would also be the most likely scenario.</p> <p>Changing to enhancement request.</p> <p>14.11.2011 23:39:31 (karsten.thoms):</p> <p>15.11.2011 06:39:00 (karsten.thoms): This issue was closed by revision 8118a112f089.</p>

	<p>eContainer should be selectable for connection ends</p> <p>04.11.2011 09:26:44 (veit.hoffmann.vh): The from and to attribute of a connection should accept eContainer. This allows modelling connections for which one of the ends is the semantic container. E.g UML Generalization.</p> <pre>class Generalization : connection (width=1) [from eContainer; to general;]</pre> <p>Currently eContainer is not available, since it is an eOperation property of EObject Class and not an eStructuralFeature.</p> <p>05.11.2011 17:09:36 (joswarmer): If the eContainer should be used this way, there should be a reference from Generalization to the eContainer. If this reference is not in the metamodel it should not be used in the from and to.</p> <p>08.11.2011 00:12:36 (karsten.thoms): The eContainer is somehow special. It is a kind of implicit reference, and I think it should be possible to specify it as possible end points.</p> <p>08.11.2011 13:58:02 (joswarmer): The eContainer is special in the sense that it is a necessary implementation property from EMF. If you really want to use the reference to the container in a model you should model it explicitly in your.ecore model. This also ensures it gets a proper understandable name. It is bad style to use the eContainer this way.</p> <p>15.11.2011 13:20:58 (karsten.thoms): I'm not sure anymore and thinking that Jos will be right here. Question is how this should be enabled for what Veit wants to express, namely specifying the connection for an UML Generalization.</p> <p>Maybe this related to issue#60, where the containment reference into which an element is inserted is specified for the create behavior.</p> <p>And maybe this makes the 'from' side of a connection optional.</p> <p>I have to see this in an example.</p> <p>15.11.2011 19:34:17 (veit.hoffmann.vh): @ 4 I don't think that's wise. One can easily think of a Model where the target of an edge has the container role. Thus you wouldn't gain much by making 'from' optional. I think it is better to make the container property optional, as it is now. This works for all cases where one of the ends has container role. In all other cases one needs to set the container property explicitly.</p> <p>16.11.2011 11:02:47 (joswarmer): I agree with veit.</p> <p>22.11.2012 14:04:10 (joswarmer):</p>

	<p>A businessselement should be attachable to Diagrams</p> <p>04.11.2011 09:30:56 (veit.hoffmann.vh): It should be possible to attach a businessselement to the diagram itself similar to MetaClasses. e.g.</p> <pre>class Model: diagram(<&lt;some properties>>) []</pre> <p>This is needed for a well structured semantic model and if DrillDownFeatures should be supportable at any time.</p> <p>05.11.2011 17:20:11 (joswarmer): I fully agree that this should be possible.</p> <p>05.11.2011 17:24:13 (joswarmer): The question is whether this should be done in the DSL , or in the manual extension code. Need to try out how this can be sued.</p> <p>08.11.2011 00:18:56 (karsten.thoms): Veit will provide a sample implementation for example.one</p> <p>14.11.2011 22:33:47 (karsten.thoms): This must be a property of the diagram. The project wizard must also offer to specify the model element type.</p> <p>I am thinking the DSL to look like this:</p> <pre>diagram mydiagram for MyModel</pre> <p>It is also necessary to know the model type to offer containment references for create features.</p> <p>To shorten the names for the root element type the import statements must occur before the 'diagram' keyword:</p> <pre>{{{ import BusinessDomainDsl.* diagram mod4j for BusinessDomainModel // imported }}}</pre> <p>15.11.2011 06:41:02 (karsten.thoms): Committed changes for DSL, Metamodel, Scoping, Templates</p> <p>The implementation code has to create the Model element now and add created elements to it now.</p> <p>15.11.2011 12:41:39 (joswarmer): I like this change. A question: should we make it mandatory that a diagram always represents one Domain model type ? I think this certainly is good style and makes it much easier to define editors with Graphiti / Spray. I am in favor of making this mandatory.</p> <p>15.11.2011 12:57:47 (karsten.thoms): At the moment it is mandatory, I was thinking the opposite way around: Should it be possible that it is optional?</p> <p>The project wizard enforces you now to choose a root element type. I have preparations pending that the model element is created and elements created into a given containment reference. I think this can make it this week.</p> <p>See issue#60 for this.</p> <p>15.11.2011 13:08:40 (joswarmer): I strongly advice not to do this (saves you work as well :-). It is a sensible restriction to ensure that the diagram always has one Domain element connected at the root. From my experience with using Graphiti / Spray I do have seen that not having a root Domain element for a diagram will make life much more complex at many places. E.g. solutions for issue http://code.google.com/a/eclipselabs.org/p/spray/issues/detail?id=60 will become more complex, as the context in which to add becomes even more unclear and more difficult to find.</p> <p>15.11.2011 13:14:28 (karsten.thoms): OK for me. It makes the code also more concise.</p> <p>15.11.2011 14:23:46 (veit.hoffmann.vh): Sorry I was very busy last week. Do you still need an example implementation for example.one</p> <p>16.11.2011 00:26:16 (karsten.thoms): Introduced a ModelService template: The ModelService class is responsible for creating the model root and attaching it to a new resource The URI of the model instance is stored in the diagram for later fetching Changed the create feature to add an element to its containment reference.</p> <p>As a further bonus, the model is not saved instantly anymore. Instead the diagram is marked dirty after element creation. If the domain model file does not exist, it will be created on saving.</p> <p>16.11.2011 00:28:33 (karsten.thoms): @Veit: You may have a look at the new implementation. Does this now fit your requirements?</p>

	<p>Connections should have a container Property</p> <p>04.11.2011 09:40:42 (veit.hoffmann.vh): It should be possible to set the container of a connection. e.g.</p> <pre>class usecasesdescriptionmodel.Inclusion: connection (width=1) [from includingUC; to includedUC; container includingUC.eContainer;]</pre> <p>This is similar to bug 42 and different from bug 57, since this behavior is only necessary for connections whose business element is not contained in one of the ends business elements.</p> <p>05.11.2011 17:21:18 (joswarmer): Right, if one of the ends is the container this is not needed, but otherwise the container need to be specified.</p> <p>05.11.2011 17:21:38 (joswarmer):</p> <p>05.11.2011 17:22:56 (joswarmer):</p> <p>08.11.2011 00:29:52 (karsten.thoms): Its not the container that could be set, it must be the containment feature</p> <p>container includingUC.eContainer.properties</p> <pre>public Connection create(ICreateConnectionContext context) { Connection newConnection = null; // get EClasses which should be connected BusinessClass source = getBusinessClass(context.getSourceAnchor()); // TODO: add source to containment feature</pre> <p>14.11.2011 22:31:57 (karsten.thoms): After thinking a bit about this the right position to specify is the create behavior. When an object is created, it must be added to a containment reference of the current container. So far we only allow one level of containment, but this will change likely with nested shapes.</p> <p>A first approach is to change the DSL like this:</p> <pre>class BusinessClass : ... behavior { create into types }</pre> <p>The scope of the possible references are the containment references of the container type (for a MetaClass it is the Model type for the Diagram, see also issue#58).</p> <p>The given reference must be used to assign the newly created object in the CreateFeature.</p> <p>16.11.2011 00:24:20 (karsten.thoms): This issue was closed by revision d8a225023394.</p> <p>16.11.2011 00:27:32 (karsten.thoms): With this commit, an element is created into a given containment reference.</p>

	<p>Custom Figures</p> <p>04.11.2011 10:01:21 (veit.hoffmann.vh): Appart from standard figures other than rectangle like ellipse. The Framework should support custom figures. E.g. the uml Actor figure.</p> <pre>class Actor : container (fill = dark_green) [customFigure <&lt;ClassName>>; ...]</pre> <p>I'm not sure how this can be implemented on source code level, but maybe a mechanism similar to SprayRectangleContainer can be used. I.e. acceptable custom figure classes should extend an abstract class/ interface that defines the methods needed by the framework for rendering.</p> <p>05.11.2011 17:22:20 (joswarmer): Also, we should provide some more standard figures.</p> <p>05.11.2011 17:22:45 (joswarmer):</p> <p>07.11.2011 11:54:26 (de.abg.reichert.joerg): We could do offer three figure reference types * proposals for the existing Graphiti shapes like Rectangle, RoundedRectangle, Ellipse (with configuration some how: width, height, degree of rounded corners) * reference to custom figure implementation classes in the classpath (implementation must implement a certain interface) * reference to figure specification in DSL: Polygons may be defined like (0,0)-(0,1)-(1,1)-(1,0) - we could build up a default DSL figure library that is shipped with Spray by default</p> <p>Beside the definition of shape figures we would also need some default connection decorator figures, some pre defined arrow styles for the connection ends like -> or - > or -<>.</p> <p>With use of the Label provider or the Documentation provider we could even provide a preview of the figures in the DSL, either by using a reference to an icon file or even more sophisticated by calculating the preview by the coordinates of the figure (SVG like).</p> <p>07.11.2011 21:22:07 (joswarmer): I will start with the first and second one (existing Graphiti figures, and an interface to implement). I will leave the third option (create a DSL for shapes) for now.</p> <p>08.11.2011 13:40:09 (veit.hoffmann.vh): I really like the third idea in comment 3. Maybe one could define layout of coposite figures in a model like that. I.e. one could define how parts of a figure behave on resize similar to how this is done in a forms oriented framework.</p> <p>To the idea of a preview. one could use the preview of graphity by generating an in memory model. I will investigate this a little more soon.</p> <p>25.03.2012 23:58:46 (fabio.filippelli): Point 2 and 3 implemented in the Shape DSL (marker interface as well).</p> <p>08.10.2012 19:46:26 (joswarmer): Fixed by the Shape DSL and option to refer to custom Java figures</p>

Description	<p>SprayUserGuide.pdf: Choose the Diagram Type "busmod"</p> <p>07.11.2011 23:27:39 (bernhard.merkle): Choose the Diagram Type "busmod"</p> <p>it is not there. There is "mod4j" however..</p> <p>08.11.2011 08:04:35 (karsten.thoms): "mod4j" comes from the example project for the same metamodel, which is installed with the SDK. "busmod" should be there definitely if you have chosen this as the last part of the project name as described.</p> <p>I am pretty sure that this works. I will try again with installing the latest build.</p> <p>09.11.2011 11:37:04 (de.abg.reichert.joerg): I think it is because of the old plugin.xml. The name of the diagram is stated there. Initially the project is generated with mod4j is used in plugin.xml. I think this is the actual problem. If you change the diagram name in the DSL than this is generated to src-gen/plugin.xml. This plugin.xml have to be copied over the plugin.xml in the project root to apply the diagram name change.</p> <p>09.11.2011 13:04:01 (karsten.thoms): The initially generated plugin.xml should be copied after finishing the project wizard. Thus, it should also contain the diagram type provider. Could you confirm again that this does not work for you?</p> <p>09.11.2011 17:41:02 (de.abg.reichert.joerg): with latest 0.0.4-SNAPSHOT, doing it exactly like described in the documentation, the busmod is set as diagram type. So this works for me.</p> <p>09.11.2011 21:16:49 (karsten.thoms):</p>

	<p>Develop Shape DSL</p> <p>09.11.2011 20:50:42 (karsten.thoms): Spray needs to be able to define custom shapes, and nested shapes. However, this should not clutter the "core" language.</p> <p>Thus, Spray needs another language which addresses the definition of Shapes. This could look something like this:</p> <pre> ===== class BusinessClass: shape BpmnMail { text () { "<<" + eClass.name + ">>" + name }; line (color=black width=2); reference properties attribute dataType; line (width=2 color=RGB(255,138,141)); reference businessRules; // will use name property by default line (width=2 color=IColorConstant::DARK_BLUE); text () ":" + description; line (width=1) ; } ----- // In a separate file: shape BpmnMail { ellipse(width=100, heigth=100, linestyle=normal) { rectangle(x=10, y=25, width=80, heigth=50) { polygon(point=(0,0), point=(25,40), point=(0,40)) } } } } ===== </pre> <p>The base project name could be org.eclipselabs.spray.shapes</p> <p>It should not only possible to define Shapes in a DSL and generate the implementation, also implementing them in Java and referring to them through JVM types should be possible.</p> <p>In long term, a preview would be helpful, but for now this is postponed.</p> <p>28.11.2011 13:50:08 (veit.hoffmann.vh): I really love this idea. Moreover i think the dsl should allow the description of behavior on resize. A rather lightweigh approach would be to have fix and relative sizes and positions e.g.</p> <pre> shape BpmnMail { ellipse(width=100, heigth=100, linestyle=normal) { rectangle(x=10%, y=25, width=80%, heigth=50) { ... } } } </pre> <p>A number meaning "fix" and a percentage meaning "resizes with parent"</p> <p>Alternatively on could have a full fledged way to describe sizes relative to any other part of the figure similar to FormLayout in swt. (see http://www.eclipse.org/articles/article.php?file=Article-Understanding-Layouts/index.html)</p> <p>22.01.2012 10:44:29 (fabio.filippelli): Task is started and first version already committed.</p> <p>25.03.2012 23:57:37 (fabio.filippelli): Already implemented (online).</p>

	<p>Layout application not appropriate</p> <p>10.11.2011 18:18:52 (de.abg.reichert.joerg): I know, that the Layout will be refactored soon, but as long as this has not happened the current way should be improved, so that the user are not confused:</p> <p>Actually I think there are multiple issues:</p> <ul style="list-style-type: none"> * when I press for code completion in container (_) then I get proposed: bold, color, figure, fill, italic, width * bold: only makes sense for fonts, or should it be interpreted as global style for the whole container? * color: same as bold * italic: same as bold * figure: not interpreted in the generator, should be cleaned up as long as it is not supported to not disturb early adopters * fill: generates this <pre>GraphicsAlgorithm containerGa = containerShape.getGraphicsAlgorithm(); containerGa.setBackground(manageColor(0, 0, 160));</pre> <p>but is not visible in the diagram - actually I do not think this is the right place to set the background color, this should be only done to PictogramElements like Rectangles, Text and so on. In Graphiti a ContainerShape as well as a Shape are only logical elements that group visible elements.</p> <ul style="list-style-type: none"> * as said already in fill, ContainerShape as Shape are only logical elements, that will grab their height and width in dependence of the dimension and positions of its visible elements. <p>Conclusion: In all places where attributes are allowed, all types of attributes are proposed, although only a subset is sensible. Some of the attributes are even not supported yet and should be left out as long as they are not supported.</p> <ul style="list-style-type: none"> * container (): can't think of any reasonable attribute yet * text (): only bold, color, fill, italic are sensible - the width should be calculated by the font/style/size + text length (there is a Graphiti operation for that), but maybe despite of that the width is still necessary; figure is not useful for text, should be left out; the fill attribute is actually not applied in the diagram * connection: width, color * rectangle: not supported yet, should be left out at all * line: width, color <p>Currently the background color can never be applied, as there is a rectangle keyword, but the generator of the Add feature does not generate any code. A figure is currently only build up from Texts and Lines. So there is no common background color, as the container is just a logical element and no rectangle is created in the Add feature.</p> <p>10.11.2011 18:19:23 (de.abg.reichert.joerg):</p> <p>19.11.2012 15:04:26 (joswarmer): This old way of doing containers is now replaced by the compartments integrated into the shape DSL. This issue is therefore not relevant anymore.</p>

	<p>Palette definition not intuitive</p> <p>10.11.2011 18:37:02 (de.abg.reichert.joerg): When I first defined a diagram editor in the Spray DSL, I wrote something like that:</p> <pre>class State : container () { text () { name }; }</pre> <p>Then I opened the diagram editor and wondered, that there is no palette. I found out, that I have to define additionally</p> <pre>behavior { create palette "PaletteName"; }</pre> <p>I think this counterintuitive. First, an entry in the palette is essential. By default Graphiti defines the compartments Objects and Connections and put nodes in Objects and References in Connections. The Spray Generator always overrides the <code>IPaletteCompartmentEntry[] getPalette()</code> method in the <code>ToolBehaviourProviderBase</code>, so if you forget to define the palette, you get surprised. That the palette is managed as a behavior is a technical aspect of Graphiti and is not obvious to the user.</p> <p>I would suggest defining palette this way:</p> <pre>paletteCompartments { classes alias "The classes" references alias "The references" }</pre> <pre>class State : paletteCompartment classes container () { text () { name }; }</pre> <p>If there is no palette compartments defined the <code>getPalette()</code> in <code>ToolBehaviourProviderBase</code> should not be overridden or at least the code in the overridden method should call <code>super.getPalette()</code>.</p> <p>This is just a proposal, have your thoughts on it.</p> <p>10.11.2011 18:44:34 (de.abg.reichert.joerg): Just a side note, the referenced attributes types there seems no way to define the palette compartment, they are always placed in a compartment named Create. With my proposal, you can write that:</p> <pre>paletteCompartments { ... attributes alias "The attributes" }</pre> <pre>class ...: container ... { ... reference actions attribute name palette attributes }</pre>

	<p>References should only be allowed to containment features</p> <p>10.11.2011 18:56:01 (de.abg.reichert.joerg): example domain model:</p> <pre> model cont. states ref. action cont actions </pre> <p>When you then use actions,</p> <pre> class State: ... reference actions attribute name </pre> <p>the add of the action will fail in the diagram, as it is not contained in a resource. So either the DSL should validate, that a containment reference is used or in the generated diagram editor code it should only be allowed to add elements that have been already created in their container.</p> <pre> model cont. states cont action </pre> <p>Would work with the existing Spray.</p> <p>If you model it in the Spray DSL like that</p> <pre> class State: ... reference actions attribute name class Action ... </pre> <p>and than create the action first as node and then try to add an action as attribute reference to the state node, this also fails in the current Spray.</p> <p>11.11.2011 15:52:40 (joswarmer): This looks very much like the same problem as http://code.google.com/a/eclipselabs.org/p/spray/issues/detail?id=60 . Non containment references could be allowed if we have the ability to specify their container, this would b the same solution as described in the other issue.</p> <p>15.11.2011 13:15:54 (karsten.thoms): I'll take that, since I'm working on issue#60. I am about to implement the scoping rules for this.</p> <p>15.11.2011 13:37:31 (joswarmer): Right Karsten, if you resolve #60, this one will be resolved as well.</p> <p>16.11.2011 08:35:02 (karsten.thoms): This issue was closed by revision a8a3457b2f59.</p>

	<p>Please explain, how to support Graphiti default shapes</p> <p>15.11.2011 14:32:33 (de.abg.reichert.joerg): Currently there is already a rule Rectangle in the Spray DSL, but the generator does not handle it yet. I naively tried to implement a further dispatch createShape operation for type Rectangle, but ended up with a lot of compilation errors in other parts of the generated code.</p> <p>There is lot of registrations and setting properties, I did not understand. For creating good looking diagrams (color gradients and so on), at least the default shapes should be supported. But for that, there must exist an understanding, how the code works and how the code can be (in first sight manually) extended to introduce rectangles.</p> <pre>def dispatch createShape (Rectangle rectangle) "" «val varname = rectangle.shapeName.toFirstLower» // Part is Rectangle { String type = «rectangle.fullyQualifiedName»; // create shape for text and set text graphics algorithm Shape «varname» = peCreateService.createShape(textContainer, false); Rectangle rectangle = gaService.createRectangle(getDiagram()); rectangle.setBackground(manageColor(«rectangle.lineColor»)); rectangle.setForeground(manageColor(«rectangle.fillColor»)); gaService.setLocationAndSize(rectangle, 0, 0, 0, 0); peService.setPropertyValue(«varname», "MODEL_TYPE", type); peService.setPropertyValue(«varname», ISprayContainer.CONCEPT_SHAPE_KEY, ISprayContainer.RECTANGLE); // create link and wire it link(«varname», addedModelElement); } "</pre> <p>28.11.2011 10:17:29 (veit.hoffmann.vh): Hi Jörg,</p> <p>for making a Rectangle show it must have a size greater than zero.</p> <pre>gaService.setLocationAndSize(rectangle, context.getX(), context.getY(), width, height);</pre> <p>with height= context.getHeight() <= 0 ? 50 : context.getHeight(); You can do that in the Layout feature also!</p> <p>Besides you should draw all shapes of a figure onto one ContainerShape. I attached an example of an AddFeature that creates a figure containing two nested rectangles an a centered direct editable text.</p> <p>28.11.2011 10:44:33 (de.abg.reichert.joerg): Hi Veit,</p> <p>you are right, setting the dimension to 0 is bad idea and instead of using textContainer I should use containerShape:</p> <pre>ContainerShape containerShape = container.createContainer(context, addedModelElement); ContainerShape textContainer = SprayContainerService.findTextShape(containerShape);</pre> <p>This is issue #86 is concerned about the right usage of the Spray runtime classes. When I used the code above in the generator this had produced non compiling code. Last week I (re-)discovered http://code.google.com/a/eclipselabs.org/p/spray/source/browse/plugins/org.eclipse.sprays.runtime.graphiti/src/org/eclipse.sprays.runtime.graphiti/containers/ So there already predefined shapes shipped with Spray and in the code you see how to interact with SprayContainerService, so most of my questions are answered.</p> <p>I have seen in your code that you use the setters of the font object, this actual not a good idea: http://www.eclipse.org/forums/index.php/m/710593/#msg_710593 https://bugs.eclipse.org/bugs/show_bug.cgi?id=355347</p> <p>28.11.2011 11:48:15 (veit.hoffmann.vh): Hi Jörg,</p> <p>thanks for pointing out the issue with the font. We will change this.</p> <p>Cheers</p> <p>Veit</p> <p>12.11.2012 17:58:03 (joswarner):</p>

	<p>New Spray Project Wizard and files without an extension</p> <p>16.11.2011 13:32:10 (Ultra30000): What steps will reproduce the problem? 1. Create a new file without an extension (like SVN uses) 2. Try to create a new Spray Project (New -> Other... -> Spray Project -> Next) 3. Exception: The selected wizard could not be started. Plug-in org.eclipse.sprayspray.xtext.ui was unable to load class org.eclipse.sprayspray.xtext.ui.SprayExecutableExtensionFactory. An error occurred while automatically activating bundle org.eclipse.sprayspray.xtext.ui (896).</p> <p>The problem may be, that IFile.getFileExtension() can return null but is used with .equals()</p> <p>(like in: org.eclipse.sprayspray.xtext.ui.wizard.MetamodelSelectionComposite.widgetSelected ())</p> <p>16.11.2011 14:17:52 (karsten.thoms): OK, reproducible.</p> <p>16.11.2011 14:21:33 (karsten.thoms): A NPE occurs in RegisterPlatformGenmodelListener#handleResource(), as described due to the missing file extension. Changed the comparison condition.</p> <p>16.11.2011 14:22:13 (karsten.thoms): This issue was closed by revision 3dd2a136f4bf.</p> <p>16.12.2011 15:35:31 (janreimone): I recently installed spray via update site. As I wanted to create a new spray project I got the following error:</p> <p>"The selected wizard could not be started. Plug-in org.eclipse.sprayspray.xtext.ui was unable to load class org.eclipse.sprayspray.xtext.ui.SprayExecutableExtensionFactory. An error occurred while automatically activating bundle org.eclipse.sprayspray.xtext.ui (690)."</p> <p>So it's exactly the same as posted above but with another number at the end. I first thought that's because I don't have Xtext installed, so I installed it. But the error stays :(How can I create a Spray project?</p> <p>16.12.2011 15:37:52 (janreimone): addition: I looked into the error log and found this root exception:</p> <p>Root exception: org.eclipse.emf.common.util.BasicEList\$BasicIndexOutOfBoundsException: index=0, size=0 at org.eclipse.emf.common.util.BasicEList.get(BasicEList.java:352) at org.eclipse.sprayspray.xtext.ui.internal.RegisterPlatformGenmodelListener.registerE Package(RegisterPlatformGenmodelListener.java:150) at org.eclipse.sprayspray.xtext.ui.internal.RegisterPlatformGenmodelListener.handleRe source(RegisterPlatformGenmodelListener.java:96) at org.eclipse.sprayspray.xtext.ui.internal.RegisterPlatformGenmodelListener \$3.visit(RegisterPlatformGenmodelListener.java:79) ...</p> <p>16.12.2011 15:56:44 (karsten.thoms): Will have a look at it.</p> <p>07.02.2012 13:33:51 (Matthias.Vianden): I have the same issue. When I try to create a spray project (latest stable release - 0.3.0) via the wizard I get the following exception:</p> <p>The selected wizard could not be started. Plug-in org.eclipse.sprayspray.xtext.ui was unable to load class org.eclipse.sprayspray.xtext.ui.SprayExecutableExtensionFactory. An error occurred while automatically activating bundle org.eclipse.sprayspray.xtext.ui (1945).</p> <p>29.03.2012 20:13:18 (karsten.thoms): Please retry with 0.4.0. I cannot reproduce it here.</p> <p>If it still exists, please attach the full stack. Best as a file.</p> <p>13.04.2012 13:28:38 (janreimone): I will try it. Do I have to use the release or the build update site?</p> <p>13.04.2012 14:35:07 (janreimone): It works now with update site of current release.</p>

	<p>Use xtend-maven-plugin, remove xtend-gen sources from repository,</p> <p>09.12.2011 08:10:48 (karsten.thoms): Xtext 2.2.0 introduces a Maven plugin to compile Xtend sources. This allows finally to remove xtend-gen sources from the repository and let them generate during the build.</p> <p>For more details see http://www.eclipse.org/Xtext/xtend/documentation/index.html#MavenSupport http://kthoms.wordpress.com/2011/12/08/xtext-2-2-finally-brings-maven-support-for-xtend/</p> <p>TODO: Evaluate the plugin for Spray and introduce it in the build. Delete generated Java classes from the repository when possible.</p> <p>02.04.2012 00:37:15 (karsten.thoms): The Xtend Maven Plugin 2.2.1 could not handle multiple source directories. This was fixed for Xtend 2.3.0, but the plugin is closely tied to the Xtend version and is also not available yet on any public repository.</p> <p>I have backported the current development state to Xtend 2.2.1 and named the version 2.2.2. This version has been deployed to the Fornax repository.</p> <p>The build now uses the Maven plugin for all plugins with xtend-gen folders. Generated files have been removed from the repository and .gitignore files have been placed into the folder.</p> <p>The build now runs without any generated sources checked in.</p>

Description	<p>Styles postprocessor classes must be compiled in separate module</p> <p>14.12.2011 08:01:48 (karsten.thoms): The workflow of org.eclipselabs.spray.styles customizes the Xtext generator by the class StyleExtendedGenerator in the same plugin.</p> <p>This workflow won't be executable in a Maven build, since the compiled class is required to execute the workflow before the class is actually compiled. The workflow is executed in the phase "generate-sources", and the class StyleExtendedGenerator will be compiled in phase "compile", which runs after the workflow.</p> <p>This is a common scenario which only can be resolved by moving the classes a workflow requires into a separate project, to which the using project has a dependency to. Then, Maven will compile the supporting classes before it builds the module that wants to use these classes.</p> <p>I propose to introduce a plugin "org.eclipse.spray.runtime.xtext", which will not only hold these postprocessors, but also other classes later that are Xtext specific additions. Ugly thing is that the postprocessor is logically dependent on the Styles DSL. Alternatively it could be a plugin named "org.eclipselabs.spray.styles.workflow" (or "..xtext"), which only holds the Xtext workflow customization.</p> <p>The Styles specific plugins must be excluded from the build until this is solved.</p> <p>14.12.2011 20:47:52 (fabio.filippelli): Added common workflow project with name "org.eclipse.spray.runtime.xtext" and referenced from style project.</p> <p>19.12.2011 12:10:03 (de.abg.reichert.joerg): screenshot</p> <p>19.12.2011 12:12:25 (fabio.filippelli): shapes are not yet integrated in spray due the development is not ready for integration.</p> <p>The palette reference will be given from spray in later development.</p> <p>24.03.2012 14:39:02 (fabio.filippelli):</p>

	<p>icon path shall be relative to project root</p> <p>29.03.2012 11:09:26 (chr.kastner): class icon "icons/somedir/somegif.gif" results to a warning, not to an error, stating "Icon 'icons/icons/somedir/somegif.gif' not found.</p> <p>Two issues:</p> <p>(a) 'icons' directory shall not be assumed (b) when file referene does not exist, it is an error, not a warning</p> <p>29.03.2012 15:41:43 (karsten.thoms): I think the warning level is exact right. There are not many cases where warnings make sense, but this is one. The error would prevent the builder to run, but actually the "error" is just that the image provider points to a non-existing (not yet) image, and the this results just that the image is not displayed. This is indeed just worth a warning. It breaks nothing, but you likely want to fix it.</p> <p>Regarding the icon path I am unsure whether this is a reasonable requirement. Could you explain why you want to put icons somewhere else? You would need to keep also in mind to add the icons to the build.properties, which is already prepared by the project wizard and you don't have to care of. The only thing is to put the images below a prepared path.</p> <p>I am closing this one as won't fix. Please reopen when you have arguments why you think the current approach is not sufficient.</p> <p>29.03.2012 20:33:32 (chr.kastner): Here are two issues:</p> <p>(a) 'icons' directory shall not be assumed</p> <p>Which is not really an effort</p> <p>(b) 'warning' vs. 'error'</p> <p>When a icon is missing, e.g. it has not been checked a ci build will not fail, what it should, a missing symbol results in non-shipping product, even an automatic test would not discover this situation!</p> <p>How many developers look at warnings, not that much, I'm professional developer for more than 20 years, and I know many, many developers never ever looking at warnings!</p> <p>I'm aware thru' an error, that the builder will not run, and in my opinion it should not, even it just an icon! Yes the resulting designer still works in its core, of course, but even you discover it in a manual test, you need another (hotfix) build, when such a trivial issue can easily be discovered.</p> <p>Maybe others seeing it differently, however different organisation have different rules, maybe it could be a workspace setting!</p> <p>If you like, you can split it in two issues!</p>

	<p>Shape settings have no effect</p> <pre>29.03.2012 17:12:14 (chr.kastner): shape { size-min(width=180,height=40) size-max(width=300,height=40) stretching(horizontal=true,vertical=false) proportional=true }</pre> <p>The order of these assignments shall be any sequence, not dictated by grammar. I'm aware of, when they are free in sequence, they may be multiple, but this resolveable thru verification.</p> <p>However these four assignments shall be part of 'Shape' itself, which would give the possibility of very fine grain resizing, e.g. one part of the compound shape is fixed and they other parts are sizeable.</p> <p>However, when one these assignments are applied in the wrong order, there are no more XText proposals, which is rather irretating.</p> <p>03.11.2012 19:33:02 (joswarmer): Your are right about the order, and Xtext dos have the functionality to make them any order while still allowing only one of each. Will pick this up.</p> <p>Setting these properties on all sun elements is nice, but quite a big change. The new compartment functionality in the Shape DSL allows some of this, I will take a look whether this scenario can be supported.</p> <p>12.11.2012 18:03:20 (joswarmer): The order of the size-min, size-max, stretching and proportional is not fixed. I thik the width and height are ok to be fixed, but we can make them variable as well.</p> <p>19.11.2012 10:35:39 (joswarmer): probabl;y caused by Graphiti issue : https://bugs.eclipse.org/bugs/show_bug.cgi?id=352542</p> <p>Styles in Graphiti only apply when the default value in the shape is unset. In Graphiti 0.9 we should use PlainCreate methods for shapes, which will not set default values in the shapes.</p> <p>19.11.2012 12:22:33 (joswarmer): Fixed this by using createPlain methods. Note however that the default transparency of 1.0 was in correct, 1.0 means full transparent. This was not noticed because this value was never applied. It now is. Also note that text in most cases needs to have a style with the background-color set to transparent, or it will show as an ugly block inside the shape. As we now use the createPlain* methods, style values for all shapes have no default anymore. Because of this I think it is wise to ensure that the DefaultSprayStyle is used whenever there is no value specified for a style property..</p>

Description	<p>Make generator extensible without need to change the source</p> <p>29.03.2012 18:01:06 (karsten.thoms): Spray's code generator produces a useful default implementation, and the generated code is extensible by the appliance of the generation gap pattern. This basically allows users to already customize code in the required way.</p> <p>However, when a change is due to a structural insufficiency of the generator, the user would be forced to extend every single class, or change the source of the Graphiti generator plugin.</p> <p>Therefore it should be possible to extend the generator itself without the means to touch its original source. Since Spray uses Xtend and Guice injection all what is needed is that the user derives their changed templates from Spray's one and provide a Guice configuration that registers the derived templates.</p> <p>The only problem is to get Spray's code generator to respect a custom Guice module to override the existing one. To do so, an extension point is required to plug it into the UI.</p> <p>29.03.2012 19:28:56 (karsten.thoms): This issue was closed by revision d47b3de34c4b.</p> <p>29.03.2012 19:51:05 (karsten.thoms): Done and documented usage in User Guide.</p> <p>A new example project was added as reference: examples/generatorextension/org.eclipse.sprays.generator.graphiti</p>

	<p>Couldn't resolve reference to root EClass of a model</p> <p>13.04.2012 15:14:08 (janreimone): After creating a Spray project with the wizard a clean Spray file is generated. According to the input I made in the wizard a root metaclass is defined as root visual class. The problem is that I get the error annotated saying that the EClass could not be resolved. I tried it with my own metamodels and with Ecore. For Ecore the following error occurs:</p> <p>Couldn't resolve reference to EClass 'EPackage'.</p> <p>The default import for Ecore is:</p> <p>import ecore.*</p> <p>which I have changed to:</p> <p>import org.eclipse.emf.ecore.*</p> <p>Furthermore, the plugin org.eclipse.emf.ecore is referenced as required in the MANIFEST.MF file. What is the matter? What can I do to get the metaclasses resolved?</p> <p>15.04.2012 15:40:49 (de.abg.reichert.joerg): I can confirm this bug:</p> <p>How to reproduce:</p> <ul style="list-style-type: none"> * Install Spray in a Eclipse Classic 3.7.2 * Create a new Spray Project via wizard <p>Variant 1: Use EMF model from installed plug-in, i.e. EMF registry</p> <ul style="list-style-type: none"> * Use "Browse registered packages" and choose a URI! <p>Variant 2: Use EMF model from local EMF project</p> <ul style="list-style-type: none"> * Create Empty EMF project * Create Ecore file * Create EMF Generator Model * export Genmodel via plugin.xml * Use "Browse workspace" in Spray wizard and choose Ecore file <p>Variant 3: Use EMF model from within Spray project</p> <ul style="list-style-type: none"> * Use Variant 2 first and then adapt the Spray project * Create Ecore file * Create EMF Generator Model <p>In all 3 variants the referenced EClass cannot be resolved in the Spray DSL.</p> <p>The only work around is to use Spray as Eclipse runtime started from the development workspace.</p> <p>15.04.2012 15:48:15 (de.abg.reichert.joerg): post scriptum: When using the runtime workspace there is also the need to import(=copy) the mm project into the workspace.</p> <p>16.04.2012 14:16:29 (karsten.thoms): OK, I will investigate this when finding some time again.</p> <p>23.04.2012 22:38:33 (karsten.thoms): Found an indication why Ecore models may not get indexed when they are from the development workspace.</p> <p>http://www.eclipse.org/forums/index.php/m/854255#msg_854255</p> <p>24.04.2012 00:45:47 (karsten.thoms): Replaced JdtToBeBuiltComputer with custom implementation JdtToBeBuiltComputerExt. Added new project org.eclipse.labs.spray.runtime.xtext.ui.</p> <p>24.04.2012 10:32:10 (janreimone): are these changes available from the stable build update site?</p> <p>25.04.2012 09:11:51 (karsten.thoms): Yes, from the CI update site https://spray.ci.cloudbees.com/job/spray-assembly-build/lastSuccessfulBuild/artifact/releng/org.eclipse.labs.spray.update.site/target/repository/</p> <p>Joerg Reichert gave feedback that he did not recognize the solution, but maybe you could confirm this.</p> <p>Sebastian Zarnekow replied in the forum that this goes actually down to a p2 bug.</p> <p>After update you should have the new plugin org.eclipse.labs.spray.runtime.xtext.ui installed.</p> <p>25.04.2012 14:56:45 (janreimone): I checked it. Same situation as before.</p> <p>25.04.2012 15:11:47 (janreimone): addition: the workaround described by Jörg doesn't work for me either.</p> <p>25.04.2012 18:11:45 (karsten.thoms): Anyway, thanks for the feedback. I'll try to find another workaround.</p> <p>12.05.2012 03:09:41 (elidekaa): The 'juno' branch has the same issue.</p> <p>14.05.2012 10:12:08 (de.abg.reichert.joerg): In response to comment #9: The workaround using the runtime workspace started from the development workspace works, if you exclude the log4j 2.0.13 dependency in the launcher configuration. If you do not exclude it a class loader exception is thrown when invoking the auto completion as Xtext has got a hard dependency to log4j 2.0.15 but when both log4j 2.0.13 and log4j 2.0.15 are included in the runtime some reflection mechanism get mixed up with the versions. I included the launcher configuration in the spray.xtext project on the Juno branch.</p> <p>14.05.2012 10:16:41 (de.abg.reichert.joerg): In response to comment #12: I can confirm this with the latest repository builds that uses Xtext 2.3M7</p> <p>3rd party:</p> <p>https://spray.ci.cloudbees.com/job/spray-ci-targetplatform-juno/lastSuccessfulBuild/artifact/releng/org.eclipse.labs.spray.repository/target/repository/</p> <p>Spray Juno Update Site:</p> <p>https://spray.ci.cloudbees.com/job/spray-assembly-build-juno/ws/releng/org.eclipse.labs.spray.update.site/target/repository/</p> <p>14.05.2012 10:23:00 (de.abg.reichert.joerg): We should rework the scoping / the content assist of the imported domain objects in the way that</p> <ul style="list-style-type: none"> * at diagram level only EClasses are proposed ** that are contained within the EPackages declared in the import section (currently everything from the classpath is proposed) (maybe also classes that extends EClasses from the EPackage as well) ** that have at least one containment reference (without containments they are not usable as root for the meta class definitions to come) * at diagram level only EClasses are proposed ** that are used in containment relationships of the EClass defined at the diagram level <p>23.05.2012 15:43:48 (dsimkins123): Dear All,</p> <p>Is there an update to this issue? I too am stuck unable to create a spray project!</p> <p>Kind regards</p> <p>Dan</p> <p>04.06.2012 00:03:01 (de.abg.reichert.joerg): This issue was closed by revision 62cbded3e68.</p> <p>07.06.2012 16:35:28 (de.abg.reichert.joerg): The fix from the juno branch have to applied to the indigo branch as well.</p> <p>14.06.2012 14:31:42 (arunbnair): When will this fix be available on the indigo branch?</p> <p>15.06.2012 09:31:06 (de.abg.reichert.joerg): Now the indigo branch includes the fix: https://spray.ci.cloudbees.com/job/spray-assembly-build/lastSuccessfulBuild/artifact/releng/org.eclipse.labs.spray.update.site/target/repository/</p> <p>If you want to use Juno, this is also available now:</p> <p>3rd party repository:</p> <p>https://spray.ci.cloudbees.com/job/spray-ci-targetplatform-juno/lastSuccessfulBuild/artifact/releng/org.eclipse.labs.spray.repository/target/repository/</p> <p>Spray update site:</p> <p>https://spray.ci.cloudbees.com/job/spray-assembly-build-juno/ws/releng/org.eclipse.labs.spray.update.site/target/repository/</p>

Description	<p>Document Sonar in Spray developer guide</p> <p>08.07.2012 17:40:01 (de.abg.reichert.joerg): The Spray build supports metrics collection via Sonar. This should be documented in the Spray developer guide. The guide should also cover which components are to exclude from investigation (how to exclude the generated code parts). Further the usage of Sonar (web interface as well as Eclipse plug-in) should be shown.</p>

Description	

Name	Value
	<p>Enable definition of connection by given start and end element</p> <p>02.09.2012 13:34:08 (de.abg.reichert.joerg): Currently there must exist a domain meta model element that can be mapped to a connection. This domain meta model element holds references to the start and the end element. But the more common case is, that there two elements that have uni- o bi-directional association to each other without such an extra third element.</p> <p>In the DSL it should be possible, to write something like this:</p> <pre> classes Element1 alias e1, Element2 alias e2 { connection () { from e1.element2Reference // this is the reference of type Element2 to e2.element1Reference // this is the reference of type Element1 } } </pre> <p>In the example above there is a bi-directional association between Element1 and Element2 assumed. Note that there might be different association roles between Element1 and Element2 defined like Person.parents->Person*, Person.siblings->Person*</p> <p>The following example shows the case when there is only a uni-directional relationship from Element2 to Element1, i.e. Element1 does not know that it is referenced by Element2:</p> <pre> classes Element1 alias e1, Element2 alias e2 { connection () { from e1 // this is the reference of type Element2 to e2.element1Reference // this is the reference of type Element1 } } </pre> <p>If there is only one relationship feature on each Element of the corresponding type the relationship feature may left off in the definition:</p> <pre> classes Element1 alias e1, Element2 alias e2 { connection () { from e1 // this is the reference of type Element2 to e2 // this is the reference of type Element1 } } </pre> <p>03.11.2012 19:22:15 (joswarmer): This is currently possible using:</p> <pre> class BusinessClass alias FullClass { container (fill=dark_green) { text () { "<<" + eClass.name + ">>" + name }; } references { superclass : connection() } behavior { create into types palette "Shapes" askFor name ; } } </pre> <p>The superclass is just an EReference in the domain model. I think it makes sense to define this inside the meta class in which the reference is defined, as is done here.</p>

	<p>Renable SVG generator after switch to model inferer in Shape DSL</p> <p>24.09.2012 18:55:54 (de.abg.reichert.joerg): After the switch to model inferer in the Shape DSL the generator is not bound anymore. As far as I know and tested it is not possible to bind IGenerator as well as model inferer at the same time (this would hinder the model inferer to run) so it is currently not possible to add even only the SVG generator. (Maybe this issue is because of the fact that the IGenerator clears all sources in src-gen before running and by this all produced resources by the model inferer are lost - so the solution would be to adapt the SVG generator to only clear all existing svg files).</p> <p>08.10.2012 21:15:07 (de.abg.reichert.joerg): Fixed on Juno branch, the model inferer checks now, if there is already a JVMType for the given qualified name (so no over generation of the file generated by the common generator).</p> <p>10.10.2012 19:23:08 (de.abg.reichert.joerg): migrated to indigo branch as well</p>

	<p>Integrate Xtext builder participants of DSLs with each other</p> <p>14.10.2012 15:19:49 (de.abg.reichert.joerg): Currently the builder participants / generators of the different DSLs do know nothing about each other. So a change e.g. in the Style DSL that has no effect to references to style definitions in other DSLs may break the Java code basis as the generated Style Java code may not be compatible to the other generated Java code that uses this code.</p> <p>So it would be best practice to always trigger the generator for all DSL artifacts that are potentially affected by the change in a DSL artifact, e.g. the Shape generator is also invoked when a style has changed as a shape can reference a style.</p> <p>scenarios:</p> <p>1. *.style file changed</p> <p>1.1 style file contains only style definitions</p> <ul style="list-style-type: none"> * (re-)generate the Java file for the style definition * if a style name has changed (or even deleted) this makes all elements dirty that references this style (as the reference should be broken then): * style definitions that have defined this style as super style * shape and connection definitions that references this style * mapping definitions in .spray files that references this style * if the style references a gradient that has been not generated yet in Java this generation should be triggered within this build * if the style references a super style that has been not generated yet in Java this generation should be triggered within this build <p>1.2 style file contains only gradient definitions</p> <ul style="list-style-type: none"> * (re-)generate the Java file for the gradient definition * if a gradient name has changed (or even deleted) this makes all elements dirty that references this gradient (as the reference should be broken then): * style definitions that references this gradient <p>1.3 style file contains gradient and style definitions</p> <ul style="list-style-type: none"> * apply first 1.2 and then 1.1 as styles may depend on existing Gradient Java files <p>2. *.shape file changed</p> <ul style="list-style-type: none"> * (re-)generate the Java file for the shape definition * if a shape name has changed (or even deleted) this makes all elements dirty that references this shape (as the reference should be broken then): * mapping definitions in .spray files that references this shape * if the shape references a style that has been not generated yet in Java this generation should be triggered within this build <p>3. *.spray file changed</p> <ul style="list-style-type: none"> * (re-)generate the Java files derived from the mapping definitions (i.e. all Graphiti feature classes as well as some more Graphiti related classes) * if in the Spray file a style is referenced that has been not generated yet in Java this generation should be triggered within this build * if in the Spray file a shape is referenced that has been not generated yet in Java this generation should be triggered within this build <p>4. domain model changed</p> <ul style="list-style-type: none"> * this should make Spray files dirty that references elements from the domain model <p>5. Workspace start</p> <ul style="list-style-type: none"> * it should be checked if there already Java files generated for .spray, .shape and .style files contained in a project if not so, the generation should be triggered (so it is not necessary to make existing files dirty or call explicitly clear project to trigger the generation) - this check could be done e.g. in the Activator class <p>04.11.2012 17:51:20 (de.abg.reichert.joerg): Sometimes the spray generator (for the .spray model file) is running ten times in a row. It only seems to happen for the spray file in the business domain project. It happens when either the spray file itself is saved, or a spray file of another project. There are no other changes done in any other file.</p> <p>Spray generating for model platform:/resource/ org.eclipse.labs.spray.examples.mydiagram/model/mydiagram.style</p> <p>Spray generating for model platform:/resource/ org.eclipse.labs.spray.examples.mydiagram/model/mydiagram.style</p> <p>Spray generating for model platform:/resource/ org.eclipse.labs.spray.examples.mydiagram/model/mydiagram.shape</p> <p>Spray generating for model platform:/resource/ org.eclipse.labs.spray.examples.mydiagram/model/mydiagram.style</p> <p>Spray generating for model platform:/resource/ org.eclipse.labs.spray.examples.mydiagram/model/mydiagram.spray</p> <p>Spray generating for model platform:/resource/ org.eclipse.labs.spray.examples.mydiagram/model/mydiagram.shape</p> <p>Spray generating for model platform:/resource/ org.eclipse.labs.spray.examples.mydiagram/model/mydiagram.style</p> <p>Spray generating for model platform:/resource/ org.eclipse.labs.spray.examples.mydiagram/model/mydiagram.spray</p> <p>Spray generating for model platform:/resource/ org.eclipse.labs.spray.examples.mydiagram/model/mydiagram.shape</p> <p>Spray generating for model platform:/resource/ org.eclipse.labs.spray.examples.mydiagram/model/mydiagram.style</p> <p>Spray generating for model platform:/resource/ org.eclipse.labs.spray.examples.mydiagram/model/mydiagram.spray</p> <p>Spray generating for model platform:/resource/ org.eclipse.labs.spray.examples.mydiagram/model/mydiagram.shape</p> <p>Spray generating for model platform:/resource/ org.eclipse.labs.spray.examples.mydiagram/model/mydiagram.style</p> <p>Spray generating for model platform:/resource/ org.eclipse.labs.spray.examples.mydiagram/model/mydiagram.spray</p> <p>Spray generating for model platform:/resource/ org.eclipse.labs.spray.examples.mydiagram/model/mydiagram.shape</p> <p>Spray generating for model platform:/resource/ org.eclipse.labs.spray.examples.mydiagram/model/mydiagram.style</p> <p>Spray generating for model platform:/resource/ org.eclipse.labs.spray.examples.mydiagram/model/mydiagram.spray</p> <p>Spray generating for model platform:/resource/ org.eclipse.labs.spray.examples.mydiagram/model/mydiagram.shape</p> <p>Spray generating for model platform:/resource/ org.eclipse.labs.spray.examples.mydiagram/model/mydiagram.style</p> <p>Spray generating for model platform:/resource/ org.eclipse.labs.spray.examples.mydiagram/model/mydiagram.spray</p> <p>Spray generating for model platform:/resource/ org.eclipse.labs.spray.examples.mydiagram/model/mydiagram.shape</p> <p>04.11.2012 19:25:49 (jowarmer): The above number of generator step happens after saving the style model. As the style model itself uses the generated Jav style files, it can trigger itself in a loop. We should avoid that some way.</p> <p>04.11.2012 19:38:49 (jowarmer): To avoid loops in style dependencies we should have an Xtext rule in the style grammar like:</p> <p>Style: (Style) "style" name=ID ("extends" (superStyle=JvmTypeReference superStyle=FromDsl=Style)?)? "!" ("description" "-"> description=STRING)? layout=StyleLayout "}".</p> <p>instead of:</p> <p>Style: (Style) "style" name=ID ("extends" superStyle=JvmTypeReference)? "!" ("description" "-"> description=STRING)? layout=StyleLayout "}".</p> <p>That way a style can either refer to a style in the DSL or to a Java style.</p>

	<p>SVG-Generator Bugs (Size and Compartments)</p> <p>14.10.2012 23:39:32 (fabio.filippelli): There are still some issues regarding the SVG generator.</p> <p>Issue 1. The SVG (and on hoover the PNG) pictures will be cutted on the right side. Please try to generate the attached shapes to reproduce this issue ("issue1.shape").</p> <p>Issue 2. While using nested shapes/compartments the SVG-file shows up two elements positionied on a wrong position. See attached file "issue2.shape".</p> <p>Regards</p> <p>15.10.2012 05:17:19 (de.abg.reichert.joerg): Issue 1: Thought, that I have fixed this by given +5 extra each for height and width in svg tag Issue 2: For nested shapes the position should be also fixed</p> <p>I tracked this is in issue #181</p> <p>But I will have look at it again if its really fixed.</p> <p>16.10.2012 08:19:42 (de.abg.reichert.joerg): Ok, I found the mistakes: * Issue 1 is related only to polygons, the width and height is now calculated correctly * Issue 2: shapes uses some default offset, so that they do not start in (0,0), when using those shapes as nested shapes this default offset is now not applied anymore</p> <p>16.10.2012 09:12:35 (joswarmer): Right, the shapes used to be a hierarchy of graphics algorithms, but has been changed to a hierarchy of of container shapes. Each subshape has coordinates relative to the parent shape. However, when there is an active cotainershape inside a non active containershape, Graphiti does not use the relative coordinates. For generating the shapes in the editor, I have a "fix" operation that fixes these coordinates. the same should be applied to the SVG generator.</p> <p>18.11.2012 16:23:55 (de.abg.reichert.joerg): * fixed position calculation (absolute and container relative works now) * added style interpretation (currently only directly annotated style information) * added connection decoration interpretation * still missing: * font attribute interpretation * interpretation of text align * interpretation of placing's radius and angle, * referenced style interpretation * gradients interpretation * color interpretation based on numbers</p>

	<p>References to domain model.ecore works only after workspace restart</p> <p>01.12.2012 21:19:35 (de.abg.reichert.joerg): What steps will reproduce the problem?</p> <ol style="list-style-type: none"> 1. Start Eclipse having Spray installed 2. create new domain model project (ecore + genmodel + generating Java out of this + export packages) OR import existing project having the characteristics from creating a new one 3. create new Spray project (configured to have reference to the domain model project) <p>What is the expected output? Inside the spray DSL after having the import of the domain model package defined scoping and resolving the referenced EClass on diagram should work</p> <p>What do you see instead? The reference to the EClass cannot be resolved.</p> <p>Workaround Restart the workspace, then the EClass is resolved.</p> <p>Possible causes * the resource listener associated with the Spray scope provider do not check for newly added.ecore/genmodel/Java projects</p> <p>04.12.2012 20:22:38 (de.abg.reichert.joerg): This issue was closed by revision 85fb55ac4ee1.</p> <p>05.12.2012 22:37:49 (Nosezeichen): I've waited for this fix :) Im developing my.ecore metamodel in iterations, e.g. if i need new EClasses or EAttributes, etc. i add them, but the Spray Project couldnt resolve these newly added EClasses. So i always created a new Spray Project, because i didnt know how to update the Spray Project itself.</p> <p>Does your fix consider this kind of development of the.ecore metamodel ? Thank you :)</p> <p>06.12.2012 09:13:21 (de.abg.reichert.joerg): It is common use case to change the domain model while building the diagram model (as you often recognize missing elements in the domain model when defining the mapping to the diagram).</p> <p>The calculation of EPackages and EClasses is cached, as this is called very often inside the calculation of the scoping for the DSL. So it is only recalculated when there are workspace changes (changes to projects, import of new projects). I exclude changes to the Spray project itself as this would lead to endless regeneration. The fix considers the case when the change status of all projects in the workspace has not calculated yet as well as the case when there workspace changes that do not effect resources (e.g. the change is the creation of new project). I did not test this for Spray installed via update site, just for Spray started in a runtime workspace.</p> <p>Also note that have to regenerate the Java sources via genmodel when you changed the.ecore model.</p> <p>Joerg</p>

	<p>Wrong default style is generated when there are multiple Spray projects</p> <p>01.12.2012 21:40:28 (de.abg.reichert.joerg): What steps will reproduce the problem?</p> <ol style="list-style-type: none"> 1. Have multiple Spray projects in your workspace 2. Save a spray DSL file (associated with shapes and directly/indirectly with styles, where the style does not inherit from another style) <p>What is the expected output? The generated Add feature base class should use the correct default style class.</p> <p>What do you see instead? The generated Add feature base class imports and uses the default shape class from a different (without being listed in the dependencies of the current plug-in project) Spray project.</p> <p>Where it has appeared: I had all existing example projects imported and did save the fowler.spray file, the generated StateMachineAddStateFeatureBase includes the call final ISprayStyle style = new PetrinetDefaultStyle(); instead of final ISprayStyle style = new DefaultSprayStyle();</p> <p>Workaround: Close all other Spray and restart workspace and the regenerate for the Spray DSL again.</p> <p>Possible cause: AddShapeFromDslFeature.xtend uses SprayStyleRef styleRef as global variable that is set by the call of def setAttributes(MetaClass cls, SprayStyleRef ssr), maybe this is done not only for the current project but for the hole workspace?</p> <p>02.12.2012 13:40:28 (joswarmer): The styleRef is not a global variable, but as the AddShapeFromDsl is injected , it probably acts as a singleton, even over multiple projects. This is clearly not the intention. An unwated side effect from the use of injection I am afraid. Solved it by changing the setAttributes in AddShapeFromDsl and AddConnectionFromDsl.</p> <p>02.12.2012 13:41:20 (joswarmer): This issue was closed by revision 1344069fecf0.</p>

	<p>Editing .shape file results in opening the generated .svg file</p> <p>05.12.2012 18:06:58 (Nosezeichen): Hello, I've got a really annoying problem when editing my shape file. Everytime i type a single letter (without saving) the svg files in the folder "shapepreviews/svg/" are regenerated. This has the affect that i get a dialog for Downloading or Opening the file. After that the Focus of my cursor isnt in the shape editor anymore and i have to click into the right place in the editor to complete my editing.</p> <p>What steps will reproduce the problem? 1. Create Eclipse Project with your own MetaModel like described in the User-Guide 2. Create Eclipse Spray-Project using that MetaModel like described in the User-Guide 3. Edit the .shape file (typing a single letter is enough)</p> <p>What is the expected output? What do you see instead? Expected output: - A Hover of the shape wich is on focus (if this feature is already existing in the version of spray i use, see below) - Nothing (if the hover feature isnt available in the version of spray that i use)</p> <p>What version of the product are you using? On what operating system? OS: Windows 7 Professional SP1 64-Bit Architecture</p> <p>Eclipse: Fresh copy of eclipse-jee-juno-SR1-win32-x86_64</p> <p>Runtime-JRE of Eclipse: JDK 1.7</p> <p>JRE System Library of Spray and MetaModel Projects: JDK 1.5.0_22</p> <p>Spray 3rdParty: https://spray.ci.cloudbees.com/job/spray-ci-targetplatform/lastSuccessfulBuild/artifact/relog/org.eclipseelabs.spray.repository/target/repository/ (at the time i installed it was Build #13, i really installed the dependencies, cause i had a fresh Eclipse Juno)</p> <p>Spray SDK Feature: version 0.5.0.201211192306 https://spray.ci.cloudbees.com/job/spray-assembly-build/lastSuccessfulBuild/artifact/relog/org.eclipseelabs.spray.update.site/target/repository/ (at the time i installed it was Build #97)</p> <p>Please provide any additional information below. In the "shapepreviews" folder there is a subfolder "svg" wich contains the shape previews as svg file, but there is no subfolder "png" wich should contain the shape previews as png files (as i read)</p> <p>Thank you for your help</p> <p>05.12.2012 20:20:08 (de.abg.reichert.joerg): When saving the shape model file, for each shape definition a SVG file is generated. When hovering is triggered inside the Shape DSL Editor the before generated SVG file is used to generate a png file (as the Eclipse SWT Browser is not able to interpret SVG).</p> <p>So by unknown causes the png is not generated in your (although I never discovered the behavior with the pop dialog). Anyway I will handle this exception by only support png file references inside the hover and in any other case no image will be linked.</p> <p>06.12.2012 09:15:34 (de.abg.reichert.joerg): With the last build (https://spray.ci.cloudbees.com/job/spray-assembly-build/109/) I tried to fix it. But I am not sure if it works.</p> <p>06.12.2012 19:48:11 (Nosezeichen): I tried out the build #109 (with workaround to install it, see Section "Please provide any additional information below" in this issue https://code.google.com/a/eclipseelabs.org/p/spray/issues/detail?id=225)</p> <p>Problem is still the same (Download Pop-up Dialog). I dont have a folder "shapepreviews/png" only one for the svg's.</p> <p>A colleague of me doesn't have this problem. he has the same Eclipse configuration as me. Maybe it is an Problem with my OS ?</p> <p>06.12.2012 19:52:56 (joswarmer): I do not have the problem either, and I am using Window7, 64 bit as well. Likely it is not your OS.</p> <p>06.12.2012 21:34:26 (de.abg.reichert.joerg): It could be an issue with the configured browser in Eclipse, so a different browser engine is used as usual.</p> <p>Could you please post an screenshot of this download popup?</p> <p>06.12.2012 22:04:58 (Nosezeichen): The Download dialog even pops up when i open my .shape file</p> <p>06.12.2012 22:12:16 (Nosezeichen): I tried to associate .svg files to a batch file wich does nothing as a workaround. thats why the type is listed as Windows-Batchdatei (Batchfile). But this didnt help either, the download dialog still asks me if i want to download or open the file.</p> <p>06.12.2012 22:31:02 (de.abg.reichert.joerg): Found the place where preview.svg comes from, in ShapeOutlinePage</p> <pre>@Override public void createControl(Composite parent) { browser = new Browser(parent, SWT.NORMAL); stateLocation = ShapeActivator.getInstance().getStateLocation().append("preview.svg"); if (!stateLocation.toFile().exists()) { try { FileWriter fw = new FileWriter(stateLocation.toFile()); fw.append(""); fw.flush(); } catch (IOException e) { e.printStackTrace(); } } super.createControl(parent); }</pre> <p>So its not a problem of the shape hover but of the outline view. Maybe it helps as a workaround to close the outline view.</p> <p>06.12.2012 22:33:05 (Nosezeichen): Thank you, closing the outline view solved the problem :)</p>

	<p>Spray projects in one workspace mess each other up</p> <p>17.02.2013 22:30:30 (NikManolov): I updated Spray last week from here https://spray.ci.cloudbees.com/job/spray-assembly-build/lastSuccessfulBuild/artifact/relog/org.eclipseelabs.spray.updatesite/target/repository/</p> <p>My previous version dated back to September 2012. After I fixed some syntax problems (You really need to update the user documentation) the following thing happened.</p> <p>What steps will reproduce the problem?</p> <ol style="list-style-type: none"> 1. I have a spray project a.b.c.mydiagram based on a.b.c.mydiagram.model 2. I create a second spray project in the same workspace a.b.c.mydiagram_newSpray based on the same model 3. In the first project a.b.c.mydiagram I make some change in mydiagram.spray and code is generated again. <p>What is the expected output? I expect small cosmetic changes to the source files</p> <p>What do you see instead? all files are generated under the package a.b.c.mydiagram_newSpray (still in the correct project). And ofcourse all old files from a.b.c.mydiagram are removed.</p> <p>If I create yet another project with some other name, and change the first project, the naming of the third project is used.</p> <p>What version of the product are you using? On what operating system? I am using Eclipse Juno x64 with Graphiti 0.10 and Spray updated last Tuesday the 12th Feb. on Windows 7 Pro x64</p> <p>Please provide any additional information below.</p> <p>19.02.2013 20:31:50 (de.abg.reichert.joerg): Please note that we did some changes how configuration is loaded and applied. So configuration is now expected to be in a file named spray.properties, this file was named differently before. That spray.properties is created when creating a new Spray project. So when you open your the spray file of your old project with the Spray editor of the current version an empty spray.properties file is generated as fall back. The empty spray.properties file is causing this strange behavior. This shall be handled. As work around you have to copy the content of the old properties file into the new one.</p> <p>19.02.2013 20:34:19 (de.abg.reichert.joerg):</p> <p>20.05.2013 15:18:25 (de.abg.reichert.joerg): The user documentation contains now a section "migration notes" that list breaking changes, like this one: https://spray.ci.cloudbees.com/job/spray-docs-build/lastSuccessfulBuild/artifact/docs/org.eclipseelabs.spray.doc.user/docs/html/SprayUserGuide.html#Renamedpropertiesfile</p> <p>So no further effort for doing some magic stuff to upgrade old Spray projects automatically.</p>

	<p>Compartment in Rectangle with Superclass</p> <p>02.04.2013 10:37:11 (dowbar2000): Hi together,</p> <p>I want to visualisate for exmple a webpage with a lot of controls in graphiti spray. I create a ecore-model with Tab, this tab contains pages (=container) where contains a lot of widgets (Labels, Buttons, etc.).</p> <p>The question is why can't I referenced a superclass (=widget) for the container to the buttons or labels. This will not showing in the Toolbar and the code-generating getting error in SprayToolBehaviorProvider (because of not generating the class).</p> <p>I attach the ecore-model und spray shapes files. Can you tell me how to do this with the superclass, or should I separatly references all widgets to container like pages?</p> <p>The other question is, is it the right way to visualize if I use a class (in the image it is SketchDomainModel) who reference to all classes in ecore.</p> <p>Thanks for helping.</p> <p>Greez Dowbar</p> <p>What version of the product are you using? On what operating system? 0.5.0</p> <p>Please provide any additional information below. Eclipse Juno 4.2.2</p> <p>02.04.2013 10:45:15 (dowbar2000): Another question is, if I want to use the widget in the toolbar the "SketchDomainModel"-Class should known all the widget class in ecore, is it?</p> <p>07.04.2013 15:48:59 (de.abg.reichert.joerg): Hi Dowbar,</p> <p>you can actually structure your domain model this way:</p> <pre> SketchDomainModel * tabs : Tab [0..*] * pages : Page [0..*] * widgets : Widget [0..*] * subWidgets : Widget [0..*] * Toolbar extends Widget * Button extends Widget </pre> <p>In Spray you define the mapping this way:</p> <p>diagram spray for SketchDomainModel style SprayDefaultStyle</p> <pre> class Tab icon "ecore/ECClass.gif" { shape TabShape { reference pages into tabCompartment } behavior { create into tabs palette "Container"; } } class Page icon "ecore/ECClass.gif" { shape PageShape { reference widgets into pageCompartment } behavior { create palette "Container"; } } class Toolbar icon "ecore/ECClass.gif" { shape ToolbarShape { reference subWidgets into toolbarCompartment } behavior { create palette "Widget"; } } class Button icon "ecore/ECClass.gif" { shape ButtonShape { name into buttonID } behavior { create palette "Widget"; } } </pre> <p>You see, you only have to leave off the "into ..." part. Adding a button to a toolbar inside the diagram will add the button domain object to the subWidgets of the toolbar domain object as the mapping definition for Toolbar states "reference subWidgets into ...".</p> <p>Best regards, Joerg</p>

	<div>Export Spray Project</div> <div>08.04.2013 11:05:30 (dowbar2000): Hi, I create a simple Spray Project and want to export it to a plug-in to use it in Eclipse. While exporting the project I get an Error-Log. There are errors like: 13. ERROR in C:\DEV\graphiti-4.2.1\workspace\demo\sketch\spray\src\gen\demo\sketch\spray\features\SprayDirectEditFeatureBase.java (at line 46) public int getEditingType() { The method getEditingType() of type SprayDirectEditFeatureBase must override a superclass method 14. ERROR in C:\DEV\graphiti-4.2.1\workspace\demo\sketch\spray\src\gen\demo\sketch\spray\features\SprayLayoutFeatureBase.java (at line 36) public boolean canLaunch() { The method canLaunch() of type SprayLayoutFeatureBase must override a superclass method The plugin is generated, but this errors irritate me.</div> <div>What version of the product are you using? On what operating system? 6.5.0-20130515 11.04.2013 12:33:12 (dowbar2000): I think this is not only the issue, after reading the log-84 in the metadata, I saw that I got problems with my Activator. It is invalid. It is same like this issue https://code.google.com/p/eclipseplatform.org/sprays/issues/detail?id=176-225 The wizard generate the spray properties in the model folder. So that's right. But how can I fix it? best regards, dowbar 11.04.2013 21:25:19 (sk.aly.wishet.pwerg): Oh, I could reproduce the behavior. Reason is, that the generated plugin manifest file uses "Bundle-RequiredExecutionEnvironment: JSE-1.5" but the generated code uses @Override for methods declared in interfaces. So the MANIFEST.MF have to be changed to use "Bundle-RequiredExecutionEnvironment: JavaSE-1.6" To be fixed by us Spray developers. The Spray project wizard should always produce a MANIFEST.MF with "Bundle-RequiredExecutionEnvironment: JavaSE-1.6" 11.04.2013 22:37:25 (dowbar2000): Thanks for the reply, when I change the execution environment to JavaSE-1.6 the error log file will not generated by exporting the plug-in, but the plug-in won't work. When I try to create me domain diagram via wizard in eclipse indigo 3.8.2, an error dialog popup an shows The selected wizard could not be started Plug-in demo.scaas.sketchflow.spray was unable to load class demo.scaas.sketchflow.spray.internal.ExecutableExtensionFactory demo.scaas.sketchflow.spray.internal.ExecutableExtensionFactory Otherwise the spray editor can not read my domain files. "The Unable to create DiagramTypeProvider class" will show in the spray editor. The upcoming log shows in the event dialog: org.eclipse.core.runtime.CoreException: Plug-in demo.scaas.sketchflow.spray was unable to load class 	<p>Spray generator produce invalid method calls when referenced EMF attribute starts with "is"</p> <p>12.04.2013 16:12:51 (de.abg.reichert.joerg): Hi, I have a problem with the generated Base files in spray, because they call a wrong method name in a special case. When I set the name of an EAttribute in my.ecore model to a name that starts with "is" than a method in the emf-project will generate that starts with "isIs". Spray calls not the method which starts with "isIs", Spray try to call a method that starts with "is" and not exist.</p> <p>Greetings René</p> <p>(originally posted here: http://groups.google.com/group/spray-users/t/342bdc2a649ddbe5)</p> <p>17.04.2013 21:56:18 (de.abg.reichert.joerg): This issue was closed by revision 9d84c08a736f.</p> <p>17.04.2013 22:00:35 (de.abg.reichert.joerg): added test projects, to reproduce.</p> <p>Fix, that is pushed removes logic that ignores attributes that already start with "is" into logic that always adds "is". Could become a problem when genmodel is configured to generate no "isIs" methods (would be better to interpret genmodel settings though).</p>

	<p>Shape value to EMF model</p> <p>16.04.2013 11:33:58 (dowbar2000): Hi,</p> <p>are there anyway to set the shape values to my emf model. E.g. I want to set the shape size, background, foreground, styles, etc. in my model for further use.</p> <p>If it isn't work, which place can I get the shape information to transfer it to my emf model?</p> <p>Because I want to represent each shape in my custom viewpart with other javafx. Thats why I want to set all the style information in my emf model.</p> <p>Thanks a lot.</p> <p>best regards,</p> <p>dowbar</p> <p>17.04.2013 11:06:46 (de.abg.reichert.joerg): It always has been the idea of Spray to clearly separate domain model and diagram model, so there is no support for this use case out of the box.</p> <p>You can try to add a post processing step (e.g. when saving the diagram file) where you read in the Graphiti diagram model as well as the domain model and query the diagram values you need from diagram model and set them to the domain model.</p> <p>Another way could be to change the logic of your custom view parts to use both diagram model as well as domain model (as in the diagram model there is the link to the domain model element for each shape).</p> <p>17.05.2013 17:07:04 (de.abg.reichert.joerg): by the way, I posted a standalone example for post processing diagram and domain model: http://groups.google.com/group/spray-dev/msg/3a6f4cb3378529a6</p> <p>18.05.2013 10:52:22 (fabio.filippelli): It would be great if the generation can be triggered automatically by Spray and the user is able to configure (bind) his own generator (maybe as subclass of an abstract Generator provided by Spray with default methods).</p> <p>Another great step could be, that the generator is triggered by an event on the Graphiti diagram (possible events are "onUpdate" "onSave").</p> <p>It should be analysed if this data could be configured in the Spray DSL.</p> <p>Possible syntax? diagram busmod for BusinessDomainModel generate onSave BusModGenerator</p>

Description	<p>Genmodel can not be found on Git projects</p> <p>17.04.2013 08:10:44 (fabio.filippelli): What steps will reproduce the problem? 1. Checkout the example projects (e.g. petrinet) from Git 2. Build everything 3. The Spray DSL can not resolve the meta model.</p> <p>What is the expected output? The DSL resolves the metamodel, because if you create a java class the meta model can be referenced from there. Just the Spray DSL cannot.</p> <p>What do you see instead? The DSL can not resolve the meta model... in the developer runtime you see following console output: !ENTRY org.apache.log4j 4 0 2013-04-17 08:09:57.149 !MESSAGE org.eclipse.labs.spray.xtext.scoping.PackageSelector - No genmodel found for package URI http://www.eclipse.org/ocl/1.1.0/OCL. If you are running in standalone mode make sure register the genmodel file.</p> <p>org.eclipse.core.internal.resources.ResourceException: Resource '/git/spray/examples/petrinet/de.htwg.petrinet.mm/model/PetriNet.genmodel' does not exist.</p> <p>Hint: If you import the domain-project by copying it (check copy project on import) then the domain model (the genmodel) can be found. But often it is necessary to share this example projects on git.</p> <p>17.04.2013 10:55:35 (de.abg.reichert.joerg): Correct, the PackageSelector implementation cannot currently handle project imports from other locations only copying these into the current workspace.</p> <p>The PackageSelector should be able to collect ecore and genmodels from projects imported from elsewhere, too.</p> <p>17.04.2013 11:29:23 (de.abg.reichert.joerg): This issue was closed by revision b36af5cdc3eb.</p>
